1. Record Nr. UNINA9910341652103321

Titolo	Figure della paternità nell'Ancien régime : atti del Seminario, Università della Valle d'Aosta, 24 giugno 2009 / a cura di Paola Bianchi e Giacomo Jori
Pubbl/distr/stampa	Torino : aAccademia university press, 2011
ISBN	978-88-97523-05-5
Descrizione fisica	160 p. : ill. ; 21 cm
Disciplina	PaternitàAspetti culturaliStoria
Locazione	FSPBC
Collocazione	XIV A 845
Lingua di pubblicazione	Italiano
Formato	Materiale a stampa
Livello bibliografico	Monografia

2. Record Nr. UNINA9910701389103321

Titolo	Research investments and market structure in the food processing, agricultural input, and biofuel industries worldwide [[electronic resource]] : executive summary / / Keith O. Fuglie ... [and others]
Pubbl/distr/stampa	[Washington, D.C.] : , : U.S. Dept. of Agriculture, Economic Research Service, , [2011]
Descrizione fisica	1 online resource (v, 26 pages) : color illustrations
Collana	Economic information bulletin ; ; no. 90
Altri autori (Persone)	FuglieKeith Owen
Soggetti	Marketing - United States Food industry and trade Agriculture and state Biomass energy - Research
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Title from PDF title screen (viewed Feb. 13, 2011).

	"December 2011." "A report form the Economic Research Service."
Nota di bibliografia	Includes bibliographical references (pages 22-26).

3. Record Nr. UNINA9910557610803321

Autore	Del Bianco Lucia
Titolo	Magnetic Nanomaterials
Pubbl/distr/stampa	Basel, : MDPI - Multidisciplinary Digital Publishing Institute, 2022
Descrizione fisica	1 online resource (234 p.)
Soggetti	History of engineering & technology Technology: general issues
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	The constant search for innovative magnetic materials increasingly leads to the creation of highly engineered systems built in different forms (films, wires, particles), structured on the nanoscale in at least one spatial direction, and often characterized by the coexistence of two or more phases that are magnetically and/or structurally different. In magnetic systems, the nanometric structural characteristics of the constituent elements, together with the type and strength of the magnetic interactions between them, determine the overall magnetic behavior and can lead to the appearance of unexpected and amazing magnetic phenomena. Indeed, the study of the magnetic properties of nanomaterials continues to arouse great interest for their intriguing fundamental properties and prospective technological applications. This Special Issue contributes to broadening the knowledge on magnetic nanomaterials, demonstrating the breadth and richness of this research field as well as the growing need to address it through an interdisciplinary approach. The papers collected in this book (two reviews and eight regular articles) report cutting-edge studies on the

production and characterization of a variety of novel magnetic nanomaterials (nanoparticles, nanocomposites, thin films and multilayers), which have the potential to play a key role in different technologically advanced sectors, such as biotechnology, nanomedicine, energy, spintronics, data storage, and sensors.
