1. Record Nr. UNISALENTO991002318779707536

Autore	Baisio, Guido : de
Titolo	Guidonis a Baiiso ... Rosarium, seu In decretorum volumen commentaria, Nicolai Superantii, patricii Veneti, iureconsu. & equitis hierosolymitani, ac etiam Petri Albignani Tretii iuriscons. adnotationibus illustrata. Cum summarijs, & indice rerum ac verborum, notatu dignorum, locupletissimo. Hac postrema editione summo studio ac diligentia a multis & variis erroribus repurgata
Pubbl/distr/stampa	Venetiis : apud Iuntas, 1577
Titolo uniforme	Rosarium 50485
Descrizione fisica	410 c. ; 2. (43 cm.)
Altri autori (Persone)	Soranzo, Niccolò Albignani, Pietro
Altri autori (Enti)	Giunta, Lucantonioed.
Lingua di pubblicazione	Latino
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Segn.: A-z8 Aa-Zz8 Aaa-Ddd8 Eee10 Front. stampato in rosso e nero xil., iniz. xil., testo su due col., car. cors. rom. Marca sul front. (Giglio fiorentino stampato in rosso, iniziali L.A. in cornice figurata); marca in fine (Giglio fiorentino e iniziali L.A. in cornice figurata)

2. Record Nr. UNINA9910768465003321

Autore	Ramirez Fernando
Titolo	Responses of Fruit Trees to Global Climate Change / / by Fernando Ramirez, Jose Kallarackal
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2015
ISBN	3-319-14200-3
Edizione	[1st ed. 2015.]
Descrizione fisica	1 online resource (47 p.)
Collana	SpringerBriefs in Plant Science, , 2192-1229
Disciplina	634.045
Soggetti	Trees Climatic changes Agriculture Botany Tree Biology Climate Change Plant Sciences
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references at the end of each chapters.
Nota di contenuto	1. Introduction -- 2. Response of trees to CO2 increase -- 3. Nutrient value of fruits in response to eCO2 -- 4. The effect of increasing temperature on phenology -- 5. Tree Phenology networks -- 6. Phenology of temperate fruit trees -- 7. Phenology of sub-tropical fruit trees -- 8. Phenology of tropical fruit trees -- 9. Climate change and chilling requirements -- 10. Precipitation -- 11. Ecophysiological adaptations and climate change -- 12. Biodiversity implications and the spread of diseases -- 13. Conclusion.
Sommario/riassunto	Global climate change is expected to produce increased carbon dioxide levels in the atmosphere, higher temperatures, aberrant precipitation patterns and a host of other climatic changes that would affect all life on this planet. This review article addresses the impact of climate change on fruit trees and the response of the trees to a changing environment. The response of fruit trees to increasing carbon dioxide levels, phenological changes occurring in the trees themselves due to increased temperature and the lower chilling hours especially in the

temperate regions, ecophysiological adaptations of the trees to the changing climate, impact of aberrant precipitation, etc. are reviewed. There is very little data on the impact of rising CO2 levels on fruit tree performance or productivity including the temperate region. Based on a large number of observations on the phenology, there is reason to believe that the flowering and fruiting of most species have advanced by quite a few days, but with variations in different crops and on different continents. The chilling hours have also grown shorter in many regions, causing considerable reductions in yield for several species. In the tropics, there is very little work on fruit trees; however, the available data show that precipitation is a major factor regulating their phenology and yield. The ecophysiological adaptations vary from species to species, and there is a need to develop phenological models in order to estimate the impact of climate change on plant development in different regions of the world. More research is also called for to develop adaptation strategies to circumvent the negative impacts of climate change.
