Nota di contenuto	Relationships of divisibility between local L-functions associated to representations of complex reductive groups -- Irreducible unitary representations of some groups of real rank two -- Vogan's algorithm for computing composition series -- Unipotent representations and unitarity -- Bochner-Riesz means of HP functions ($0 < p < 1$) on compact Lie groups -- Injection de modules spheriques pour les espaces symetriques reductifs dans certaines representations induites -- On the cyclicity of vectors associated with Duflo involutions -- Corrigenda and addenda to "on the cyclicity of vectors associated with Duflo involutions" -- Atomic Hardy spaces on semisimple Lie groups -- Orbital integrals on symmetric spaces -- Recurrence relations for Plancherel functions -- A cohomological method for the determination of limit multiplicities -- Springer representations and coherent continuation representations of Weyl groups -- Distributions spheriques invariantes sur l'espace symetrique semi-simple et son c-dual.
Sommario/riassunto	All the papers in this volume are research papers presenting new results. Most of the results concern semi-simple Lie groups and non-Riemannian symmetric spaces: unitarisation, discrete series characters, multiplicities, orbital integrals. Some, however, also apply to related fields such as Dirac operators and characters in the general case.
