Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Sommario/riassunto	Palgrave Critical Universities Studies Series Editor: John Smyth, University of Huddersfield, UK This book explores how the kinds of world-wide restructurings of higher education and research work that are underway today have not only increased employment insecurity in academia but may actually be producing unemployment both for those within academia and for graduate job-seekers in other sectors. Recent and current re-organisations of higher education and research work, and re-orientations of academic life (as students, researchers, teachers) generally, which are taking place around the world, achieve exactly the opposite of what they claim: though ostensibly undertaken to facilitate employment, these moves actually produce unemployment both for those within academia and for graduate job-seekers in other sectors.

Nota di contenuto	Introduction from DG-CLIMA -- Introduction from the Editors -- Challenges for adaptation modelling -- Hazard, exposure and vulnerability modelling -- Sectoral models for impact and adaptation assessment -- Adaptation modelling and policy action -- Conclusions.
Sommario/riassunto	<p>This open access book focuses on an issue only marginally tackled by this literature: the still existing gap between adaptation science and modelling and the possibility to effectively access and exploit the information produced by policy making at different levels, international, national and local. To do so, the book presents the proceedings of a high-level expert workshop on adaptation modelling, integrated with main results from the “Study on Adaptation Modelling” (SAM-PS) commissioned by the European Commission's Directorate-General for Climate Action (DG CLIMA) and implemented by the CMCC Foundation – Euro-Mediterranean Centre on Climate Change, in collaboration with the Institute for Environmental Studies (IVM), Deltares, and Paul Watkiss Associates (PWA). What is the latest development in adaptation modelling? Which tools and information are available for adaptation assessment? How much are they practically usable by the policy community? How their uptake by practitioners can be improved? What are the major research gaps in adaptation modelling that needs to be covered in the next future? How? This book addresses these questions presenting the results of a study on adaptation modelling commissioned by the European Commission's Directorate-General for Climate Action (DG CLIMA) enriched by the outcomes of a high-level expert workshop on adaptation also part of the research. This book aspires to provide a useful support to academics, policy makers and practitioners in the field of adaptation to orient them in the expanding adaptation modelling assessment literature and suggest practical ways for its application. This book, mainly addressed to academics, policy makers and practitioners in the field of adaptation, aims to providing orientation in the large and expanding methodological/quantitative literature, presenting novelties, guiding in the practical application of adaptation assessments and suggesting lines for future research. .</p>
