

1. Record Nr.	UNIBAS000035634
Titolo	Manuale Montecatini dei trattamenti antiparassitari / [testi di Giorgio Oelker ; , tavole di Bruno Chiesa]
Pubbl/distr/stampa	Montecatini : Società Generale per l'Industria Mineraria e Chimica, stampa 1962
Descrizione fisica	263 p., 50 carte di tav. tutte color. : ill. ; 22 cm.
Disciplina	668.65 632.9
Soggetti	Antiparassitari - Impiego agricolo
Lingua di pubblicazione	Italiano
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	A cura del Servizio propaganda agraria della Societa Montecatini

Nota di contenuto Four faces of working with dignity -- Toward a theory of dignity -- Measuring the subtle realms of work -- Deflecting abuse and mismanagement -- Avoiding overwork -- Defending autonomy -- Negotiating employee involvement -- Coworkers, for better or worse -- Worker dignity and well-being -- Dignity, agency, and the future of work.

Sommario/riassunto Human dignity, the ability to establish a sense of self-worth and self-respect and to enjoy the respect of others, is necessary for a fully realized life. Working with dignity is a fundamental part of achieving a life well-lived, yet the workplace often poses challenging obstacles because of mismanagement or managerial abuse. Defending dignity and realizing self-respect through work are key to workers' well-being; insuring the dignity of employees is equally important for organizations as they attempt to make effective use of their human capital. In this book Randy Hodson, a sociologist of work and organizational behavior, applies ethnographic and statistical approaches to this topic, offering both a richly detailed, inside look at real examples of dignity in action, and a broader analysis of the pivotal role of dignity at work.

Nota di contenuto	Introduction -- Mathematic and Kinematic Fundamentals -- Kinematics of Multibody Systems -- Equations of Motion for Complex Multibody Systems -- Kinematics and Dynamics of the Vehicle Body -- Modeling and Analysis of Suspension Systems -- Modeling of Road-Wheel Interactions -- Powertrain Modeling -- Applied Forces and Torques -- Single-Track Model -- Double-Track Model -- Three-Dimensional Vehicle Model -- Model of a Typical Complex Vehicle -- Selected Applications -- References.
Sommario/riassunto	The authors examine in detail the fundamentals and mathematical descriptions of the dynamics of automobiles. In this context, different levels of complexity are presented, starting with basic single-track models up to complex three-dimensional multi-body models. A particular focus is on the process of establishing mathematical models based on real cars and the validation of simulation results. The methods presented are explained in detail by means of selected

application scenarios. In addition to some corrections, further application examples for standard driving maneuvers have been added for the present second edition. To take account of the increased use of driving simulators, both in research, and in industrial applications, a new section on the conception, implementation and application of driving simulators has been added.
