Sommario/riassunto

This volume uses a biography-as-history approach to illuminate the interconnectedness of the peoples of the Americas, West Africa, and Europe. Contributors highlight individuals' and people's experiences made possible by their participation in the creation of an Atlantic world, where conflict, cooperation, necessity and invention led to new societies and cultures. Composed of chapters that span a broad chronological, topical and thematic range, *Atlantic Biographies* highlights the uniqueness of the Atlantic as a social, political, economic, and cultural theater bound together to illustrate what the Atlantic meant to those subjects of each chapter. This is a book about people, their resilience, and their resolve to carve a niche or have a broader impact in the ever-changing world around them.

Sommario/riassunto	<p>Cancer is the second leading cause of death worldwide, and was accountable for an estimated 9.6 million deaths in 2018. Nowadays, about 1 in 6 deaths in the world is due to cancer. Another major global public health issue is HIV. Over 70 million people have been infected with the HIV virus and about 35 million people have died of HIV-related illness, since the start of the epidemic. We have been fighting against these two serious diseases by finding successful treatments. The discovery of effective drugs is important for fighting cancer and HIV. Natural products, which are secondary metabolites produced by various living organisms, have been playing a principal role in drug discovery and developments, because of their structural and biological diversity. Many clinically used drugs have come from natural products; for example, more than 60% of anticancer drugs currently in clinical use are derived from natural sources. This Special Issue aims to collect original research and review articles focusing on notable and recent contributions to the discovery and development of novel anticancer and anti-HIV drug candidates from natural sources. Up-to-date knowledge from various research fields is welcome. This could be of great interest for scientists working in different research areas, such as natural product chemistry, including isolation and structural elucidation; phytochemistry; medicinal chemistry, including chemically modified natural compounds with improved biological activity; pharmacology; molecular biology; mechanisms of action study using natural products</p>

or related compounds; pharmacognosy, etc. Biological studies of natural extracts without an appropriate chemical characterization may not be considered.
