Sommario/riassunto

This book provides a snapshot of the current state-of-the-art of the understanding of the fundamentals of ICPMS, instrumental development, methods development, spectral interpretation and applications. It covers a diverse range of topics including: bioanalytical applications (immunoassay, state of phosphorylation, metallo-drugs); environmental applications (drinking water, groundwater, seawater, speciation); reaction cells and collision cells (theory and applications); archaeology; laser ablation; isotope ratio analysis; and the performance, characterization and applications of multicollector

Sommario/riassunto	How modern philosophers use and perpetuate myths about prehistory. <p>The state of nature, the origin of property, the origin of government, the primordial nature of inequality and war - why do

political philosophers talk so much about the Stone Age? And are they talking about a Stone Age that really happened, or is it just a convenient thought experiment to illustrate their points?

Karl Widerquist and Grant S. McCall take a philosophical look at the origin of civilisation, examining political theories to show how claims about prehistory are used. Drawing on the best available evidence from archaeology and anthropology, they show that much of what we think we know about human origins comes from philosophers' imagination, not scientific investigation.

Key Features

- Shows how modern political theories employ ambiguous factual claims about prehistory
- Brings archaeological and anthropological evidence to bear on those claims
- Tells the story of human origins in a way that reveals many commonly held misconceptions
