Nota di bibliografia

Includes bibliographical references at the end of each chapters and index.

Nota di contenuto

Chapter 1. Introduction -- Chapter 2. A rational society -- Chapter 3.

The tyranny of competition -- Chapter 4. Hyper-consumption and inequality -- Chapter 5. The great gamble of global finance vs. the real economy -- Chapter 6. Economic rationality vs. the Earth -- Chapter 7. The promise and threat of the Internet age -- Chapter 8. Conclusion: Into a bright post-capitalist future?

#### Sommario/riassunto

This book challenges the hegemonic view that economic calculation represents the ultimate rationality. The West legitimises its global dominance by the claim to be a rational, democratic, science-based and progressive civilisation. Yet, over the past decades, the dogma of economic rationality has become an ideological black hole whose gravitational pull allows no public debate or policy to escape. Political leaders of all creeds are held in its orbit and public language is saturated by it. This dogma has pervaded all spheres of life, ushering the age of post-rationality, especially in English speaking countries. The authors discuss several aspects of post-rational global capitalism still dominated by the Anglosphere: hyper-competition, hyper-consumption, inequality, volatile global financial markets, environmental degradation and the unforeseen effects of the internet-mediated communication revolution. The book concludes by discussing some utopian and dystopian future scenarios and asking whether the West can transcend its crisis of rationality. .
