

1. Record Nr.	UNICAMPANIAVAN00114017
Autore	Layek, Gorachand C.
Titolo	An introduction to dynamical systems and chaos / G. C. Layek
Pubbl/distr/stampa	New Delhi, : Springer, 2015
Titolo uniforme	An introduction to dynamical systems and chaos
Descrizione fisica	XVIII, 622 p. : ill. ; 24 cm
Soggetti	34-XX - Ordinary differential equations [MSC 2020] 34C28 - Complex behavior and chaotic systems of ordinary differential equation [MSC 2020] 34D20 - Stability of solutions to ordinary differential equation [MSC 2020] 34D45 - Attractors of solutions to ordinary differential equation [MSC 2020] 37-XX - Dynamical systems and ergodic theory [MSC 2020] 37C75 - Stability theory for smooth dynamical systems [MSC 2020] 37D45 - Strange attractors, chaotic dynamics of systems with hyperbolic behavior [MSC 2020]
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	The book discusses continuous and discrete systems in systematic and sequential approaches for all aspects of nonlinear dynamics. The unique feature of the book is its mathematical theories on flow bifurcations, oscillatory solutions, symmetry analysis of nonlinear systems and chaos theory. The logically structured content and sequential orientation provide readers with a global overview of the topic. A systematic mathematical approach has been adopted, and a number of examples worked out in detail and exercises have been included. Chapters 1–8 are devoted to continuous systems, beginning with one-dimensional flows. Symmetry is an inherent character of nonlinear systems, and the Lie invariance principle and its algorithm for finding symmetries of a system are discussed in Chap. 8. Chapters 9–13 focus on discrete systems, chaos and fractals. Conjugacy relationship among maps and its properties are described with proofs. Chaos theory and its connection with fractals, Hamiltonian flows and

symmetries of nonlinear systems are among the main focuses of this book.

Over the past few decades, there has been an unprecedented interest and advances in nonlinear systems, chaos theory and fractals, which is reflected in undergraduate and postgraduate curricula around the world. The book is useful for courses in dynamical systems and chaos, nonlinear dynamics, etc., for advanced undergraduate and postgraduate students in mathematics, physics and engineering.
