Sommario/riassunto	<p>Cognition is an international journal that publishes theoretical and experimental papers on the study of the mind. It covers a wide variety of subjects concerning all the different aspects of cognition, ranging from experimental studies of behavior and of the brain to formal analysis.</p> <p>Papers will be selected on the basis of their scientific quality, their degree of innovation and their unambiguous theoretical advance to the study of cognition. Paper's overall soundness of the argument and degree of empirical motivation, especially from converging sources, are more important than adherence to specific methodological principles. Studies that selectively focus on the cognitive and neural mechanisms that underlie problems with cognition in clinical populations or on purely methodological questions fall outside the scope of Cognition. Cognition occasionally publishes special issues devoted to a research area that has seen rapid recent progress, promising new approaches, and convergence among different disciplines.</p> <p>Contributions:</p> <ul style="list-style-type: none"> • Full theoretical and experimental papers on the study of the mind. • Brief articles reporting original empirical findings, major theoretical advances or crucial developments that warrant rapid communication to the scientific community • Proposals for special issues on a new and important area in the field • Discussions
