Collana	Uniwersytet ódzki
Soggetti	Economy Business Economy / Management Transport / Logistics
Lingua di pubblicazione	Polacco
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	<p>Nowadays, modern technologies are an important element supporting the development of companies. Businesses are interested in implementing solutions which increase the efficiency of operation and improve the quality of services rendered. The practical application of technologies creates new opportunities for companies to achieve a competitive advantage. Therefore, the use of technologies leads to increasing the profitability of operations. The research undertaken by the authors is particularly fitting in this time of rapid development and dynamic changes in logistical processes. The monograph tackles the problem of appropriate selection of logistical tools and offers ways of solving it. A steady rise of consumer expectations, fierce competition, a constant need to find new markets for products and services — these are only some of the challenges which businesses face on a daily basis. Modern technologies are a particularly important tool facilitating the functioning of companies where many complex operations are conducted. Warehouse management and the relevant storage of goods require the realization of a series of processes supported by various technological solutions. They introduce automation in the company operations and, as a result, gradually replace manual tasks. New technologies and the achievable growth in competitiveness resulting</p>

from their implementation constitute a significant area of interest for companies and researchers alike. Warehouse management companies seek practical solutions which will be effective in their operations. The monograph is an answer to the market needs defined above. Raising the subject is justified by the interest of companies in implementing modern technologies which create an opportunity to gain measurable benefits. The main purpose of the monograph is to identify the mechanisms which determine the impact of modern technologies on increasing the competitiveness of warehouse management companies.

Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	pt. 1. Introduction -- pt. 2. Tribal models -- pt. 3. Encapsulating systems, economic development and tribal strategy.
Sommario/riassunto	First published in 1980, this groundbreaking Routledge Revival is a reissue of an original and authentic anthropological account of Pukhtun society by Professor Akbar Ahmed. Combining extensive fieldwork data collected among the Mohmand tribe in the Northwest Frontier Province of Pakistan with historical and literary sources, Professor Ahmed's

study seeks to construct an ideal-type model of Pukhtun society based on the ideal Code of the Pukhtuns and to analyse the conditions of its maintenance and transformation. The author's thesis is that this ideal model exists within Pukht
