

1.	Record Nr.	UNINA990006005970403321
	Autore	Williams, Glanville Llewelyn
	Titolo	The Proof of Guilt : A Study of the English Criminal Trial / Glanville Williams
	Pubbl/distr/stampa	London, : Stevens & Sons, 1955
	Descrizione fisica	VIII, 294 p. ; 22 cm
	Disciplina	345
	Locazione	FGBC
	Collocazione	XIII D 79
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
2.	Record Nr.	UNICASRML0236075
	Autore	HALL, Robert E.
	Titolo	Macroeconomics : theory, performance, and policy / Robert E. Hall ; John B. Taylor
	Pubbl/distr/stampa	New York, : Norton & Company, 1988
	Edizione	[2nd ed]
	Descrizione fisica	566 p. : graf. e tab. ; 24 cm
	Altri autori (Persone)	TAYLOR, John B.
	Lingua di pubblicazione	Italiano
	Formato	Materiale a stampa
	Livello bibliografico	Monografia

3. Record Nr.	UNINA9910830771003321
Autore	Liu Feng (Electrical engineering teacher)
Titolo	Merging optimization and control in power systems : physical and cyber restrictions in distributed frequency control and beyond / / Feng Liu [and three others]
Pubbl/distr/stampa	Hoboken, New Jersey : , : Wiley, , [2022] ©2022
ISBN	1-119-82796-5 1-119-82793-0
Descrizione fisica	1 online resource (435 pages)
Collana	IEEE Press Series on Control Systems Theory and Applications
Disciplina	621.319
Soggetti	Electric power systems - Control
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Includes index.
Nota di contenuto	Cover -- Title Page -- Copyright -- Contents -- Foreword -- Preface -- Acknowledgments -- Chapter 1 Introduction -- 1.1 Traditional Hierarchical Control Structure -- 1.1.1 Hierarchical Frequency Control -- 1.1.1.1 Primary Frequency Control -- 1.1.1.2 Secondary Frequency Control -- 1.1.1.3 Tertiary Frequency Control -- 1.1.2 Hierarchical Voltage Control -- 1.1.2.1 Primary Voltage Control -- 1.1.2.2 Secondary Voltage Control -- 1.1.2.3 Tertiary Voltage Control -- 1.2 Transitions and Challenges -- 1.3 Removing Central Coordinators: Distributed Coordination -- 1.3.1 Distributed Control -- 1.3.2 Distributed Optimization -- 1.4 Merging Optimization and Control -- 1.4.1 OptimizationGuided Control -- 1.4.2 FeedbackBased Optimization -- 1.5 Overview of the Book -- Bibliography -- Chapter 2 Preliminaries -- 2.1 Norm -- 2.1.1 Vector Norm -- 2.1.2 Matrix Norm -- 2.2 Graph Theory -- 2.2.1 Basic Concepts -- 2.2.2 Laplacian Matrix -- 2.3 Convex Optimization -- 2.3.1 Convex Set -- 2.3.1.1 Basic Concepts -- 2.3.1.2 Cone -- 2.3.2 Convex Function -- 2.3.2.1 Basic Concepts -- 2.3.2.2 Jensen's Inequality -- 2.3.3 Convex Programming -- 2.3.4 Duality -- 2.3.5 Saddle Point -- 2.3.6 KKT Conditions -- 2.4 Projection Operator -- 2.4.1 Basic Concepts -- 2.4.2 Projection Operator -- 2.5 Stability Theory -- 2.5.1 Lyapunov Stability -- 2.5.2 Invariance Principle -- 2.5.3 Input-Output Stability -- 2.6 Passivity and

Dissipativity Theory -- 2.6.1 Passivity -- 2.6.2 Dissipativity -- 2.7 Power Flow Model -- 2.7.1 Nonlinear Power Flow -- 2.7.1.1 Bus Injection Model (BIM) -- 2.7.1.2 Branch Flow Model (BFM) -- 2.7.2 Linear Power Flow -- 2.7.2.1 DC Power Flow -- 2.7.2.2 Linearized Branch Flow -- 2.8 Power System Dynamics -- 2.8.1 Synchronous Generator Model -- 2.8.2 Inverter Model -- Bibliography -- Chapter 3 Bridging Control and Optimization in Distributed Optimal Frequency Control.

3.1 Background -- 3.1.1 Motivation -- 3.1.2 Summary -- 3.1.3 Organization -- 3.2 Power System Model -- 3.2.1 Generator Buses -- 3.2.2 Load Buses -- 3.2.3 Branch Flows -- 3.2.4 Dynamic Network Model -- 3.3 Design and Stability of Primary Frequency Control -- 3.3.1 Optimal Load Control -- 3.3.2 Main Results -- 3.3.3 Implications -- 3.4 Convergence Analysis -- 3.5 Case Studies -- 3.5.1 Test System -- 3.5.2 Simulation Results -- 3.6 Conclusion and Notes -- Bibliography -- Chapter 4 Physical Restrictions: Input Saturation in Secondary Frequency Control -- 4.1 Background -- 4.2 Power System Model -- 4.3 Control Design for PerNode Power Balance -- 4.3.1 Control Goals -- 4.3.2 Decentralized Optimal Controller -- 4.3.3 Design Rationale -- 4.3.3.1 Primal-Dual Algorithms -- 4.3.3.2 Design of Controller (4.6) -- 4.4 Optimality and Uniqueness of Equilibrium -- 4.5 Stability Analysis -- 4.6 Case Studies -- 4.6.1 Test System -- 4.6.2 Simulation Results -- 4.6.2.1 Stability and Optimality -- 4.6.2.2 Dynamic Performance -- 4.6.2.3 Comparison with AGC -- 4.6.2.4 Digital Implementation -- 4.7 Conclusion and Notes -- Bibliography -- Chapter 5 Physical Restrictions: Line Flow Limits in Secondary Frequency Control -- 5.1 Background -- 5.2 Power System Model -- 5.3 Control Design for Network Power Balance -- 5.3.1 Control Goals -- 5.3.2 Distributed Optimal Controller -- 5.3.3 Design Rationale -- 5.3.3.1 Primal-Dual Gradient Algorithms -- 5.3.3.2 Controller Design -- 5.4 Optimality of Equilibrium -- 5.5 Asymptotic Stability -- 5.6 Case Studies -- 5.6.1 Test System -- 5.6.2 Simulation Results -- 5.6.2.1 Stability and Optimality -- 5.6.2.2 Dynamic Performance -- 5.6.2.3 Comparison with AGC -- 5.6.2.4 Congestion Analysis -- 5.6.2.5 Time Delay Analysis -- 5.7 Conclusion and Notes -- Bibliography.

Chapter 6 Physical Restrictions: Nonsmoothness of Objective Functions in LoadFrequency Control -- 6.1 Background -- 6.2 Notations and Preliminaries -- 6.3 Power System Model -- 6.4 Control Design -- 6.4.1 Optimal Load Frequency Control Problem -- 6.4.2 Distributed Controller Design -- 6.5 Optimality and Convergence -- 6.5.1 Optimality -- 6.5.2 Convergence -- 6.6 Case Studies -- 6.6.1 Test System -- 6.6.2 Simulation Results -- 6.7 Conclusion and Notes -- Bibliography -- Chapter 7 Cyber Restrictions: Imperfect Communication in Power Control of Microgrids -- 7.1 Background -- 7.2 Preliminaries and Model -- 7.2.1 Notations and Preliminaries -- 7.2.2 Economic Dispatch Model -- 7.3 Distributed Control Algorithms -- 7.3.1 Synchronous Algorithm -- 7.3.2 Asynchronous Algorithm -- 7.4 Optimality and Convergence Analysis -- 7.4.1 Virtual Global Clock -- 7.4.2 Algorithm Reformulation -- 7.4.3 Optimality of Equilibrium -- 7.4.4 Convergence Analysis -- 7.5 RealTime Implementation -- 7.5.1 Motivation and Main Idea -- 7.5.2 RealTime ASDPD -- 7.5.2.1 AC MGs -- 7.5.2.2 DC Microgrids -- 7.5.3 Control Configuration -- 7.5.4 Optimality of the Implementation -- 7.6 Numerical Results -- 7.6.1 Test System -- 7.6.2 Nonidentical Sampling Rates -- 7.6.3 Random Time Delays -- 7.6.4 Comparison with the Synchronous Algorithm -- 7.7 Experimental Results -- 7.8 Conclusion and Notes -- Bibliography -- Chapter 8 Cyber Restrictions: Imperfect Communication in Voltage Control of Active Distribution Networks -- 8.1 Background -- 8.2

Preliminaries and System Model -- 8.2.1 Note and Preliminaries --
 8.2.2 System Modeling -- 8.3 Problem Formulation -- 8.4
 Asynchronous Voltage Control -- 8.5 Optimality and Convergence --
 8.5.1 Algorithm Reformulation -- 8.5.2 Optimality of Equilibrium --
 8.5.3 Convergence Analysis -- 8.6 Implementation -- 8.6.1
 Communication Graph.
 8.6.2 Online Implementation -- 8.7 Case Studies -- 8.7.1 8Bus Feeder
 System -- 8.7.2 IEEE 123Bus Feeder System -- 8.8 Conclusion and
 Notes -- Bibliography -- Chapter 9 Robustness and Adaptability:
 Unknown Disturbances in LoadSide Frequency Control -- 9.1
 Background -- 9.2 Problem Formulation -- 9.2.1 Power Network --
 9.2.2 Power Imbalance -- 9.2.3 Equivalent Transformation of Power
 Imbalance -- 9.3 Controller Design -- 9.3.1 Controller for Known Pjin
 -- 9.3.2 Controller for TimeVarying Power Imbalance -- 9.3.3 Closed
 Loop Dynamics -- 9.4 Equilibrium and Stability Analysis -- 9.4.1
 Equilibrium -- 9.4.2 Asymptotic Stability -- 9.5 Robustness Analysis --
 9.5.1 Robustness Against Uncertain Parameters -- 9.5.2 Robustness
 Against Unknown Disturbances -- 9.6 Case Studies -- 9.6.1 System
 Configuration -- 9.6.2 SelfGenerated Data -- 9.6.3 Performance Under
 Unknown Disturbances -- 9.6.4 Simulation with Real Data -- 9.6.5
 Comparison with Existing Control Methods -- 9.7 Conclusion and
 Notes -- Bibliography -- Chapter 10 Robustness and Adaptability:
 Partial Control Coverage in Transient Frequency Control -- 10.1
 Background -- 10.2 StructurePreserving Model of Nonlinear Power
 System Dynamics -- 10.2.1 Power Network -- 10.2.2 Synchronous
 Generators -- 10.2.3 Dynamics of Voltage Phase Angles -- 10.2.4
 Communication Network -- 10.3 Formulation of Optimal Frequency
 Control -- 10.3.1 Optimal PowerSharing Among Controllable
 Generators -- 10.3.2 Equivalent Model With Virtual Load -- 10.4
 Control Design -- 10.4.1 Controller for Controllable Generators --
 10.4.2 Active Power Dynamics of Uncontrollable Generators -- 10.4.3
 Excitation Voltage Dynamics of Generators -- 10.5 Optimality and
 Stability -- 10.5.1 Optimality -- 10.5.2 Stability -- 10.6
 Implementation With Frequency Measurement -- 10.6.1 Estimating i
 Using Frequency Feedback -- 10.6.2 Stability Analysis.
 10.7 Case Studies -- 10.7.1 Test System and Data -- 10.7.2
 Performance Under Small Disturbances -- 10.7.2.1 Equilibrium and its
 Optimality -- 10.7.2.2 Performance of Frequency Dynamics -- 10.7.3
 Performance Under Large Disturbances -- 10.7.3.1 Generator Tripping
 -- 10.7.3.2 ShortCircuit Fault -- 10.8 Conclusion and Notes --
 Bibliography -- Chapter 11 Robustness and Adaptability: Heterogeneity
 in Power Controls of DC Microgrids -- 11.1 Background -- 11.2
 Network Model -- 11.3 Optimal Power Flow of DC Networks -- 11.3.1
 OPF Model -- 11.3.2 Uniqueness of Optimal Solution -- 11.4 Control
 Design -- 11.4.1 Distributed Optimization Algorithm -- 11.4.2
 Optimality of Equilibrium -- 11.4.3 Convergence Analysis -- 11.5
 Implementation -- 11.6 Case Studies -- 11.6.1 Test System and Data
 -- 11.6.2 Accuracy Analysis -- 11.6.3 Dynamic Performance
 Verification -- 11.6.4 Performance in Plugnplay Operations -- 11.7
 Conclusion and Notes -- Bibliography -- Appendix A Typical
 Distributed Optimization Algorithms -- A.1 ConsensusBased
 Algorithms -- A.1.1 Consensus Algorithms -- A.1.2 CuttingPlane
 Consensus Algorithm -- A.2 FirstOrder GradientBased Algorithms --
 A.2.1 Dual Decomposition -- A.2.2 Alternating Direction Method of
 Multipliers -- A.2.3 Primal-Dual Gradient Algorithm -- A.2.4 Proximal
 Gradient Method -- A.3 SecondOrder NewtonBased Algorithms -- A.
 3.1 Barrier Method -- A.3.2 Primal-Dual InteriorPoint Method -- A.4
 ZerothOrder Online Algorithms -- Bibliography -- Appendix B Optimal

Power Flow of Direct Current Networks -- B.1 Mathematical Model -- B.1.1 Formulation -- B.1.2 Equivalent Transformation -- B.2 Exactness of SOC Relaxation -- B.2.1 SOC Relaxation of OPF in DC Networks -- B.2.2 Assumptions -- B.2.3 Exactness of the SOC Relaxation -- B.2.4 Topological Independence -- B.2.5 Uniqueness of the Optimal Solution -- B.2.6 Branch Flow Model.
B.3 Case Studies.
