Working Concepts; 2 Survive and Reproduce; 3 Integrating Forestry and Wildlife Management; 4 Management Strategies; 5 Forest Attributes and Wildlife Needs (FAAWN); Appendix: Conversion Factors; Back Cover

Sommario/riassunto

Across the continental United States, one can identify 20 distinct forest cover types. Most of these are to be found on federal lands managed by the U.S. Forest Service and Bureau of Land Management. Those responsible for the management of trees that form the 20 different cover types and the diversity of forest wildlife that reside in them must have a solid grounding in concepts of forest management, especially silviculture, as well as concepts of wildlife management, in order to integrate both as part of any effective natural resource management plan.
