| Sommario/riassunto | This Standard represents the progress made to date in evolving graphical symbols for use in preparation of logic diagrams for systems of binary-state devices. The Standard contains two alternate but overlapping sets of symbols. Since agreement on a common set of symbols could not be obtained, no preference is implied between the two sets presented herein. This represents a solution that seems best |

under circumstances that presently prevail. It is anticipated that the Standard will be reviewed at the Task Group level at regular intervals, and eventually agreement will be sought for a set of graphical symbols based on a common symbology. It is hoped that groups that have not been represented heretofore will participate at Task Group level in the preparation of future revisions.
