

1. Record Nr.	UNINA990002048420403321
Autore	Perrone, Pietro
Titolo	Storia prammatico-critica delle scienze naturali e mediche presso i greci, romani, arabi ed i popoli dell'Europa al Medio-evo : contenente l'esposizione da' più remoti tempi sino al sec. 15. dell'origine e progressi della chimica / Pietro Perrone
Pubbl/distr/stampa	Napoli : Gennaro Palma, 1854
Descrizione fisica	3 v. (1305 p.) ; 22 cm
Disciplina	500 610
Locazione	DAGEN
Collocazione	61 VI B.7/120
Lingua di pubblicazione	Italiano
Formato	Materiale a stampa
Livello bibliografico	Monografia

2. Record Nr.	UNINA9910300403803321
Autore	Costard René
Titolo	Ultrafast Dynamics of Phospholipid-Water Interfaces : Studied by Nonlinear Time-Resolved Vibrational Spectroscopy // by René Costard
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2015
ISBN	3-319-22066-7
Edizione	[1st ed. 2015.]
Descrizione fisica	1 online resource (112 p.)
Collana	Springer Theses, Recognizing Outstanding Ph.D. Research, , 2190-5053
Disciplina	591.19247
Soggetti	Biophysics Chemistry, Physical and theoretical Cell membranes Atomic structure Molecular structure Spectrum analysis Microscopy Biological and Medical Physics, Biophysics Physical Chemistry Membrane Biology Atomic/Molecular Structure and Spectra Spectroscopy and Microscopy
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"Doctoral Thesis accepted by Max-Born-Institut, Berlin, Germany."
Nota di bibliografia	Includes bibliographical references at the end of each chapters.
Nota di contenuto	Introduction -- Vibrational Spectroscopy -- Ultrafast Vibrational Dynamics of Phospholipid Hydration Sites -- Ultrafast Vibrational Dynamics of Phospholipid Hydration Shells -- Conclusions -- Appendix: Experimental Pulse Parameters.
Sommario/riassunto	This thesis presents a highly innovative study of the ultrafast structural and vibrational dynamics of hydrated phospholipids, the basic constituents of cell membranes. As a novel approach to the water-phospholipid interface, the author studies phosphate vibrations using the most advanced methods of nonlinear vibrational spectroscopy,

including femtosecond two-dimensional infrared spectroscopy. He shows for the first time that the structure of interfacial water undergoes very limited fluctuations on a 300 fs time scale and that the lifetimes of hydrogen bonds with the phospholipid are typically longer than 10 ps. Such properties originate from the steric hindrance of water fluctuations at the interface and the orienting action of strong electric fields from the phospholipid head group dipoles. In an extensive series of additional experiments, the vibrational lifetimes of the different vibrations and the processes of energy dissipation are elucidated in detail.
