Sommario/riassunto	<p>This volume presents recent research achievements concerning the molecular genetic basis of agronomic traits in rice. Rice (<i>Oryza sativa</i> L.) is the most important food crop in the world, being a staple food for more than half of the world's population. Recent improvements in living standards have increased the worldwide demand for high-yielding and high-quality rice cultivars. To achieve improved agricultural performance in rice, while overcoming the challenges presented by climate change, it is essential to understand the molecular basis of agronomically important traits. Recently developed techniques in molecular biology, especially in genomics and other related omics fields, can reveal the complex molecular mechanisms involved in the control of agronomic traits. As rice was the first crop genome to be sequenced, in 2004, molecular research tools for rice are well-established, and further molecular studies will enable the development of novel rice cultivars with superior agronomic performance.</p>

Sommario/riassunto	Like every child in Is-Land, all Astra Ordott wants is to have her Security Shot, do her National Service and defend her Gaian homeland from Non-Lander "infiltrators." But when one of her Shelter mothers, the formidable Dr Hokma Blesser, tells her the shot will limit her chances of becoming a scientist and offers her an alternative, Astra agrees to her plan. When the orphaned Lil arrives to share Astra's home, Astra is torn between jealousy and fascination. Lil's father taught her some alarming ideas about Is-Land and the world, but when she pushes Astra too far, the heartache that results goes far beyond the loss of a friend. If she is to survive, Astra must learn to deal with devastating truths about Is-Land, Non-Land and the secret web of adult relationships that surrounds her.
