LTE (long-term evolution) mobile communication system is offering high bitrates in IP communications. Fourth Generation Mobile Communications/LTE describes various aspects of LTE as well as the change of paradigm, which it is bringing to mobile communications. The book is a vital resource for the entire mobile communication community. Coverage includes: LTE standards and architecture, Radio access sub-system, Signaling on the radio path, Macrocells, microcells, femtocells, SIM card and security, SIM card description, GPS driven applications, The Apple model, and much more more.

Sommario/riassunto

In this Postface, one of our primary objectives as editors, is to weave together into a coherent whole the insights and analyses of our contributors. We aim to show how the chapters in the volume complement each other, highlighting both similarities and differences in the patterns of the nominal system of various creole languages. A second objective is to try to formulate some hypotheses regarding the use of bare nouns in creole languages and the role of Universal Grammar in shaping the linguistic properties of the creoles under study. To the degree that creole bare nouns have common properties, we try to identify the grammatical options that UG makes available to natural languages in the domain of the Noun Phrase.

Sommario/riassunto	In Australia, 'country girl' names a field of experiences and life-stories by girls and women who have grown up outside of the demographically dominant urban centres. It also names a set of ideas about Australia that is surprisingly consistent across the long twentieth century despite also working as an index of changing times. This book offers a fresh perspective on this history and a new focus on the ever-changing experience of Australian rural life. It argues that the country girl has not only been a long-standing counterpart to the Australian bush man she has, more importantly, figured as
