Historical Decompositions of the Output Gap -- 16. Historical Decompositions of the Monetary Conditions Gap -- 17. Conditional Forecasts of Inflation -- 18. Conditional Forecasts of Output Growth -- Appendix. Description of the Data Set -- References.
Sommario/riassunto	This paper develops a panel unobserved components model of the monetary transmission mechanism in the world economy, disaggregated into its fifteen largest national economies. This structural macroeconometric model features extensive linkages between the real and financial sectors, both within and across economies. A variety of monetary policy analysis and forecasting applications of the estimated model are demonstrated, based on a novel Bayesian framework for conditioning on judgment.
