1. Record Nr. UNINA990003242270403321

Autore	Formica, Carmelo
Titolo	La TERRA COME ECOSISTEMA
Pubbl/distr/stampa	Napoli : Ferraro, 1988
Edizione	[1]
Descrizione fisica	pp.492
Disciplina	020.001
Locazione	DECGE
Collocazione	020.001.FOR.
Lingua di pubblicazione	Italiano
Formato	Materiale a stampa
Livello bibliografico	Monografia

2. Record Nr. UNINA9910254125103321

Autore	Guex Jean
Titolo	Discrete Biochronological Time Scales / / by Jean Guex, Federico Galster, Øyvind Hammer
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2016
ISBN	3-319-21326-1
Edizione	[1st ed. 2016.]
Descrizione fisica	1 online resource (166 p.)
Disciplina	550
Soggetti	Geology—Statistical methods Paleontology Mathematical physics Quantitative Geology Mathematical Applications in the Physical Sciences
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.

Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Nota di contenuto	Biochronological Scales -- Graph Theoretical Approach -- Interval Graphs and Stratigraphic Contradictions -- The UA Method and the Uagraph Program -- Transgressive-Regressive Cycles and Benthic Foraminifera -- Comparison Between the Uagraph and Conop Programs -- Lower Jurassic Radiolarian Biochronology and Evolutionary Rates -- Calibrating Biochronological Zones with Geochronology -- Statistical Pseudo-Improvements of the UA Method -- Conclusions.
Sommario/riassunto	The object of this book is to explain how to create a synthesis of complex biostratigraphic data, and how to extract from such a synthesis a relative time scale based exclusively on the fossil content of sedimentary rocks. Such a time scale can be used to attribute relative ages to isolated fossil-bearing samples. The book is composed of 10 chapters together with several appendices. It is a totally revised version of “Biochronological Correlations” published in 1991 and includes various new chapters. The book offers a solution for the theoretical problem of how fossils can be used to make reliable quantitative stratigraphic correlations in sedimentary geology. It also describes the use of highly efficient software along with several examples. The authors compare their theoretical model with 2 other relevant studies: probabilistic stratigraphy and constrained optimization (CONOP).
