

1. Record Nr. UNINA990004215590403321
Autore Hardy, Thomas <1840-1928>
Titolo The Trumpet-major : John Loveday a soldier in the war with Buonaparte : and Robert his brother : first mate in the merchant service : a tale / by Thomas Hardy

Pubbl/distr/stampa London : Macmillan, 1950

Descrizione fisica X, 374 p. ; 22 cm

Locazione FLFBC

Collocazione P.3 BR.C.312

Lingua di pubblicazione Inglese

Formato Materiale a stampa

Livello bibliografico Monografia

2. Record Nr. UNISALENTO991000312229707536
Autore Frascarelli, Mario
Titolo Formulario delle società cooperative : dalla costituzione della cooperativa alla sua liquidazione passando, naturalmente, attraverso la gestione / Mario Frascarelli

Pubbl/distr/stampa Milano : FAG, c1997

Descrizione fisica 240 p. ; 24 cm

Disciplina 334.068

Soggetti Cooperative - Gestione

Lingua di pubblicazione Italiano

Formato Materiale a stampa

Livello bibliografico Monografia

3. Record Nr.	UNINA9910829875703321
Autore	Sheluhin Oleg I.
Titolo	Self-similar processes in telecommunications // Oleg I. Sheluhin, Sergey M. Smolskiy, Andrey V. Osin
Pubbl/distr/stampa	Chichester, England ; , : Wiley, , c2007 [Piscataway, New Jersey] : , : IEEE Xplore, , [2007]
ISBN	1-282-34615-6 9786612346156 0-470-06209-6 0-470-06210-X
Descrizione fisica	1 online resource (336 p.)
Altri autori (Persone)	SmolskiySergey M OsinAndrey V
Disciplina	621.382 621.382150151922
Soggetti	Telecommunication systems - Mathematical models Internetworking (Telecommunication) Self-similar processes
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Foreword -- About the authors -- Acknowledgements -- 1 Principal Concepts of Fractal Theory and Self-Similar Processes -- 1.1 Fractals and Multifractals -- 1.1.1 Fractal Dimension of a Set -- 1.1.2 Multifractals -- 1.1.3 Fractal Dimension D0 and Informational Dimension D1 -- 1.1.4 Legendre Transform -- 1.2 Self-Similar Processes -- 1.2.1 Definitions and Properties of Self-Similar Processes -- 1.2.2 Multifractal Processes -- 1.2.3 Long-Range and Short-Range Dependence -- 1.2.4 Slowly Decaying Variance -- 1.3 'Heavy Tails' -- 1.3.1 Distribution with 'Heavy Tails' (DHT) -- 1.3.2 'Heavy Tails' Estimation -- 1.4 Hurst Exponent Estimation -- 1.4.1 Time Domain Methods of Hurst Exponent Estimation -- 1.4.2 Frequency Domain Methods of Hurst Exponent -- Estimation -- 1.5 Hurst Exponent Estimation Problems -- 1.5.1 Estimation Problems -- 1.5.2 Nonstationarity Problems -- 1.5.3 Computational Problems -- 1.6 Self-Similarity Origins in Telecommunication Traffic -- 1.6.1 User's

Sommario/riassunto

For the first time the problems of voice services self-similarity are discussed systematically and in detail with specific examples and illustrations. 'Self-Similar Processes in Telecommunications' considers the self-similar (fractal and multifractal) models of telecommunication traffic and efficiency based on the assumption that its traffic has fractal or multifractal properties (is self-similar). The theoretical aspects of the most well-known traffic models demonstrating self-similar properties are discussed in detail and the comparative analysis of the different models' efficiency for self-similar traffic is presented. This book demonstrates how to use self-similar processes for designing new telecommunications systems and optimizing existing networks so as to achieve maximum efficiency and serviceability. The approach is rooted in theory, describing the algorithms (the logical arithmetical or computational procedures that define how a task is performed) for modeling these self-similar processes. However, the language and ideas are essentially accessible for those who have a general knowledge of the subject area and the advice is highly practical: all models, problems and solutions are illustrated throughout using numerous

real-world examples. Adopts a detailed, theoretical, yet broad-based and practical mathematical approach for designing and operating numerous types of telecommunications systems and networks so as to achieve maximum efficiency . Places the subject in context, describing the current algorithms that make up the fractal or self-similar processes while pointing to the future development of the technology . Offers a comparative analysis of the different types of self-similar process usage within the context of local area networks, wide area networks and in the modeling of video traffic and mobile communications networks . Describes how mathematical models are used as a basis for building numerous types of network, including voice, audio, data, video, multimedia services and IP (Internet Protocol) telephony The book will appeal to the wide range of specialists dealing with the design and exploitation of telecommunication systems. It will be useful for the post-graduate students, lecturers and researchers connected with communication networks disciplines.
