| Sommario/riassunto      | Memoir World War II--> In December 1944 First Lieutenant Ewing R. "'Pete"' McClelland was captured in the Battle of the Bulge. Soon afterwards in an Allied air attack on the German POW camp where he was held, he was killed. Back home in Pennsylvania, his young widow  |

and three small children survived him. Too young to have lasting recollections, Ben W. McClelland, the soldier's son who was just beyond infancy, became one of the war's fatherless innocents for whom the memories of others would form the paternal image. As the boy evolved into manhood,

| Nota di contenuto       | Active Galactic Nuclei: Basic Physics and Main Components -- Multiwavelength Evidence of the Physical Processes in Radio Jets -- The Broad-Line Region in Active Galactic Nuclei -- Cold Gas Near Active Galactic Nuclei -- AGN Beyond the 100pc Scale -- The Fueling and Evolution of AGN: Internal and External Triggers -- X-Ray Survey Results on Active Galaxy Physics and Evolution -- The Links Between AGN and Galaxy Formation. |
| Sommario/riassunto      | The energy source in Active Galactic Nuclei is commonly accepted to be gravitational and released through accretion of matter onto a supermassive black hole. Since the discovery of the first radio galaxies and quasars in the early sixties, tremendous progress has been made in unveiling, analyzing and modelling the different components in AGN: the accretion disk, the jets of relativistic particles, the X-ray absorber      |

close to the central engine, the "torus" which funnels the ionizing radiation, the surrounding clouds of dense material in the broad-line region and narrow-line region, the cool molecular and dusty material around the torus, as well as jet-induced effects on larger scales. Yet, it remains to incorporate all these components and physical processes within a self-consistent AGN model that would take into account, and predict, all the facets of observed AGN activity. Besides discussing the elements of this "Unified Model of AGN," this book also addresses the still not-entirely-understood link of an AGN with its host galaxy and also the related question of the birth and growth of massive black holes in the universe, which is of prime interest for cosmology. The collection of lecture notes in this volume written by recognized experts in the field of Active Galactic Nuclei address students and young researchers. They are aimed at providing both an introduction and at the same time an overview of the state of the art of AGN research.
