Nota di contenuto

Introduction Analysis of deployment cycle effects on MTF staffing and aggregate workloads How does family health care utilization change in response to the deployment cycle?Conclusions

Sommario/riassunto

The Army wished to understand whether the Army's Force Generation (ARFORGEN) cycle created ebbs and flows in the ability of military treatment facilities to provide care and respond to changing family needs as soldiers and care providers deploy and return home. This study examines how the cycle affects capability and soldier health care utilization at Army military treatment facilities and how it affects family health care utilization.
