## Sommario/riassunto

The attack on Pearl Harbor, which precipitated the Greater East Asia War and its initial triumphs, aroused pride and a host of other emotions among the Japanese people. Yet the single year in which Japanese forces occupied territory from Alaska to Indonesia was followed by three years of terrible defeat. Nevertheless, until the shattering end of the war, many Japanese continued to believe in the invincibility of their country. But in the diaries of well-known writers including Nagai Kafu, Takami Jun, Yamada Futaru, and Hirabayashi Taiko and the scholar Watanabe Kazuo, varying doubts were vividly, though privately, expressed. Donald Keene, renowned scholar of Japan, selects from these diaries, some written by authors he knew well. Their revelations were sometimes poignant, sometimes shocking to Keene. Ito Sei's fervent patriotism and even claims of racial superiority stand in stark contrast to the soft-spoken, kindly man Keene knew. Weaving archival materials with personal recollections and the intimate accounts themselves, Keene reproduces the passions aroused during the war and the sharply contrasting reactions in the year following Japan's surrender. Whether detailed or fragmentary, these entries communicate the reality of false victory and all-too-real defeat.

Sommario/riassunto	The past half century has seen an evolution in thinking from 'flood control' to 'flood risk management', recognizing that risk results from

both hazard and vulnerability. Rather than rely only on engineering structures to reduce flood magnitude or extent, recent policies emphasize avoiding construction in flood-prone areas (or moving people from floodplains), reducing impacts on exposed populations through early warning systems, and insurance to aid in recovery. Implementing this new approach faces many challenges but also offers opportunities for synergies, as described in this book for a range of large floodplain rivers and smaller urban streams across North America and Europe. This book is unique in presenting the voices of those on the front lines of implementing a new paradigm in flood risk management, each river with a unique set of challenges and opportunities derived from its specific geography as well as differences in governance between the American and European contexts. .
