

1.	Record Nr.	UNINA990007065000403321
	Autore	Guyot, Yves <1843-1928>
	Titolo	La Science économique : ses lois inductives / Yves Guyot
	Pubbl/distr/stampa	Paris : A. Costes, 1928
	Edizione	[6. éd. entièrement refondue]
	Descrizione fisica	XXII, 405 p. ; 24 cm
	Disciplina	330
	Locazione	FGBC
	Collocazione	XV B 155
	Lingua di pubblicazione	Francese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
2.	Record Nr.	UNINA9910887881403321
	Autore	Kobelev Vladimir
	Titolo	Fundamentals of Structural Optimization (II) : Shape, Anisotropy, Topology / / by Vladimir Kobelev
	Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2024
	ISBN	3-031-59140-2
	Edizione	[1st ed. 2024.]
	Descrizione fisica	1 online resource (351 pages)
	Collana	Mathematical Engineering, , 2192-4740
	Disciplina	624.17713
	Soggetti	Engineering mathematics Engineering Mathematics Matemàtica per a enginyers Llibres electrònics
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia

Nota di contenuto

Scaling Methods. Optimality of Michell Structures and membrane shells -- One-Dimensional Variational Methods. Optimization of twisted spherical shell -- Methods of Domain Variations for Shape Optimization -- Methods of Local Variations. Topological derivatives and Bubble Methods -- Methods of Tensor Transformations for Anisotropic Medium -- Methods of Differential Geometry. Optimal distributions of the residual stresses -- Integral Equation Methods. Optimization of stiffeners and needle-shaped inclusions -- Isoperimetric Inequalities. Structural optimization problems of stability.

Sommario/riassunto

This book provides a comprehensive overview of analytical methods for solving optimization problems, covering principles and mathematical techniques alongside numerical solution routines, including MAPLE and MAXIMA optimization routines. Each method is explained with practical applications and ANSYS APDL scripts for select problems. Chapters delve into topics such as scaling methods, torsion compliance, shape variation, topological optimization, anisotropic material properties, and differential geometry. Specific optimization problems, including stress minimization and mass reduction under constraints, are addressed. The book also explores isoperimetric inequalities and optimal material selection principles. Appendices offer insights into tensors, differential geometry, integral equations, and computer algebra codes. Overall, it's a comprehensive guide for engineers and researchers in structural optimization.
