

1.	Record Nr.	UNINA990007146720403321
	Autore	Vinci, Giuseppe
	Titolo	Riforma Bassanini : ordinamento delle autonomie locali prima e dopo la L. 15 maggio 1997, n. 127 / Giuseppe Vinci
	Pubbl/distr/stampa	Torino : Finanze e Lavoro, 1997
	ISBN	88-8149-063-3
	Descrizione fisica	XV, 295 p. ; 23 cm
	Disciplina	342
	Locazione	DDCIC
	Collocazione	XIII B 26
	Lingua di pubblicazione	Italiano
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
2.	Record Nr.	UNINA9910822937903321
	Autore	Gros Francois <1925->
	Titolo	A biology for development / / Francois Gros
	Pubbl/distr/stampa	Les Ulis : , : EDP Sciences, , [2009] ©2009
	ISBN	1-283-03959-1 9786613039590 2-7598-0329-5
	Descrizione fisica	1 online resource (250 p.)
	Collana	Essais
	Disciplina	574
	Soggetti	Biology - Forecasting Medicine - History - 20th century
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Description based upon print version of record.
	Nota di bibliografia	Includes bibliographical references.

Nota di contenuto

pt. 1. The fabulous destiny of biology -- pt. 2. Biology and the great developmental challenges.

Sommario/riassunto

Where will humanity stand at the dawn of the 22nd century? The answer depends on our determination to control the powerful transformations that accompany the beginning of the 21st: unprecedented demographic growth, ageing of populations, irrepressible migratory flows, dramatic reduction of some natural resources, disruption of millennial climatic cycles, rapid spread of new pathologies. A number of these transformations are part of the generally complex, often inevitable evolution of our planet, not only geo-ecologically, but also in economics, politics, society. However, many of them present a challenge to development, that unique ability of human societies to improve their condition. To cope with these evolutions and threats, the resources offered by science have never seemed so crucial, even if science alone cannot provide the answer. Nothing less than a scientific revolution is needed, a revolution that will give us more durable control of our destiny, leading to a world of greater solidarity and respect of our environment. All, or almost all, scientific disciplines are concerned. But the life sciences are more than any other, already engaged as they are today in a process of profound change in their concepts, exploratory techniques and applications.
