Sommario/riassunto	Nel giro di quarant'anni, da quando è stata scoperta la struttura del Dna, l'uomo ha dovuto rivedere valori e certezze accumulati in secoli di riflessioni e pregiudizi. Quali sono dunque i nuovi valori? E come fare per sviluppare una riflessione etica che tenga conto delle nuove conoscenze ma anche dei bisogni dell'uomo? Sono queste le domande che hanno spinto Maurizio Mori, un esperto del settore, a raccogliere in un volume gli scritti di Uberto Scarpelli (1924-1994), uno dei maggiori esponenti italiani di filosofia del diritto, disciplina di cui è stato per anni docente alla Statale di Milano

Sommario/riassunto

A comprehensive, step-by-step introduction to wavelets in statistics. What are wavelets? What makes them increasingly indispensable in statistical nonparametrics? Why are they suitable for ""time-scale"" applications? How are they used to solve such problems as denoising, regression, or density estimation? Where can one find up-to-date information on these newly ""discovered"" mathematical objects? These are some of the questions Brani Vidakovic answers in Statistical Modeling by Wavelets. Providing a much-needed introduction to the latest tools afforded statisticians by wavelet theory,
