

1. Record Nr.	UNINA990007951950403321
Titolo	La brique antique et médiévale : production et commercialisation d'un matériau : actes du colloque international organisé par le Centre d'histoire urbaine de l'École normale supérieure de Fontenay/Saint Cloud et l'École française de Rome : (Saint-Cloud, 16-18 novembre 1995) / édités par Patrick Boucheron, Henri Broise et Yvon Thébert
Pubbl/distr/stampa	Roma : École française de Rome, 2000
ISBN	2-7283-0594-3
Descrizione fisica	VIII, 486 p. : ill. ; 28 cm
Collana	Collection de l'École française de Rome ; 272
Disciplina	691.4
Locazione	FLFBC
Collocazione	691.4 BOU 1
Lingua di pubblicazione	Italiano Francese
Formato	Materiale a stampa
Livello bibliografico	Monografia

2. Record Nr.	UNISALENTO991001317499707536
Autore	Magnus, Kurt
Titolo	Schwingungen : Eine Einfuhrung in die theoretische Behandlung von Schwingungsproblemen / Kurt Magnus
Pubbl/distr/stampa	Stuttgart : Teubner, 1969
Edizione	[2. uberarbeitete Auflage]
Descrizione fisica	251 p. ; 21 cm.
Collana	Leitfaden der angewandten Mathematik und Mechanik (LAMM)
Classificazione	AMS 70J AMS 70K
Disciplina	531.322
Soggetti	Linear vibration theory Nonlinear motions
Lingua di pubblicazione	Tedesco
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	1. ed.: 1961

3. Record Nr.	UNINA9910346663303321
Autore	Gonsalvi Luca
Titolo	Homogeneous Catalysis and Mechanisms in Water and Biphasic Media / Luca Gonsalvi
Pubbl/distr/stampa	MDPI - Multidisciplinary Digital Publishing Institute, 2019 Basel, Switzerland : , : MDPI, , 2019
ISBN	9783038975854 3038975850
Descrizione fisica	1 electronic resource (158 p.)
Soggetti	Spectrum analysis, spectrochemistry, mass spectrometry
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	In recent years, water phase chemistry and catalysis has witnessed a renewed interest, also in view of increasing environmental and economical concerns. Novel approaches, materials, and catalysts have been designed, for example, to convey the properties of known transition metal catalysts to their water-soluble analogs, reaching high activities and selectivities. This was possible thanks to new synthetic pathways to molecular catalysts, new mechanistic insights into the role of water as a non-innocent solvent, the use of theoretical methods and advanced engineering techniques, and the application of novel concepts for phase transfer agents in biphasic catalysis. The book contains three review articles and six research articles, addressing topics related to water phase chemistry and catalysis, ranging from the use of cyclodextrins as mass transfer agents in biphasic catalysis, to water-soluble catalyst design for targeted chemical transformation, to the application of ultrasonic monitoring of biocatalysis in water, covering aspects such as chemical synthesis, various aspects of catalysis, and engineering solutions. The range of topics addressed in this book will stimulate the reader's interest and provide a valuable source of information for researchers in academia and industry.
