1. **Record Nr.** UNINA990008576520403321

   Autore Yaranga, Zofia

   Titolo Bibliographie des travaux en langue francaise sur l'Afrique au sud du Sahara : sciences humaines et sociales : 1984 / realisee par Zofia Yaranga

   Pubbl/distr/stampa Paris : EHESS, 1986

   Descrizione fisica 303 p. ; 24 cm

   Locazione FSPBC

   Collocazione XIV E 3273

   Lingua di pubblicazione Francese

   Formato Materiale a stampa

   Livello bibliografico Monografia

   Note generali In testa al front.: Ecole des hautes etudes en science sociales. Centre d'etudes africaines

2. **Record Nr.** UNINA9910463118803321

   Autore Kleinschmager Sebastian

   Titolo Can static type systems speed up programming? [[electronic resource]] : an experimental evaluation of static and dynamic type systems / / Sebastian Kleinschmager

   Pubbl/distr/stampa Hamburg, : Anchor Academic Pub., 2013

   ISBN 3-95489-540-4

   Descrizione fisica 1 online resource (114 p.)

   Disciplina 006.22

   Soggetti Computer programming
   Application software
   Electronic books.

   Lingua di pubblicazione Inglese

   Formato Materiale a stampa

   Livello bibliografico Monografia

   Note generali "Disseminate knowledge"--Cover.

   Nota di bibliografia Includes bibliographical references.

Nota di contenuto

Can static type systems speed up programming? An experimental evaluation of static and dynamic type systems; Abstract; Zusammenfassung (German Abstract); Table of Contents; Directory of Figures; Directory of Tables; Directory of Listings; 1. Introduction; 2. Motivation & Background; 2.1 Motivation; 2.2 Maintenance and Debugging; 2.2.1 Maintenance in a Nutshell; 2.2.2 Debugging in a Nutshell; 2.3 Documentation and APIs; 2.3.1 Documentation of Software Systems; 2.3.2 APIs and Application of their Design Principles in General Programming; 2.4 Type Systems

2.5 Empirical Research in Software Engineering2.5.1 On Empirical Research; 2.5.2 Controlled Experiments; 2.5.3 Current State of Empirical Research in Software Engineering; 3. Related Work; 3.1 Gannon (1977); 3.2 Prechelt and Tichy (1998); 3.3 Daly, Sazawal and Foster (2009); 3.4 Hanenberg (2010); 3.5 Steinberg, Mayer, Stuchlik and Hanenberg - A running Experiment series; 3.5.1 Steinberg (2011); 3.5.2 Mayer (2011); 3.5.3 Stuchlik and Hanenberg (2011); 4. The Experiment; 4.1 The Research Question; 4.2 Experiment Overview; 4.2.1 Initial Considerations

4.2.2 Further Considerations: Studies on Using Students as Subjects4.2.3 Design of the Experiment; 4.3 Questionnaire; 4.4 Hard- and Software Environment; 4.4.1 Environment; 4.4.2 Programming Languages; 4.4.2.1 Java; 4.4.2.2 Groovy; 4.5 Workspace Applications and Tasks; 4.5.1 The Java Application - A Labyrinth Game; 4.5.2 The Groovy Application - A simple Mail Viewer; 4.5.3 Important Changes made to both Parts; 4.5.4 The Tasks; 4.5.4.1 The Task Types; 4.5.4.2 Tasks 1 and 10 - 2 Types to identify; 4.5.4.3 Tasks 2 and 11 - 4 Types to identify; 4.5.4.4 Tasks 4 and 13 - Semantic Error

4.5.4.5 Tasks 5 and 14 - Semantic Error4.5.4.6 Tasks 6 and 15 - 8 Types to identify; 4.5.4.7 Tasks 7 and 16 - Stack size 2 and branch size 3; 4.5.4.8 Tasks 8 and 17 - 12 types to identify; 4.5.4.9 Tasks 9 and 18 - Stack size 2 and branch size 5; 4.5.4.10 Summary of Variables and Mapping of Tasks to Hypotheses; 4.6 Experiment Implementation; 5. Threats to Validity; 5.1 Internal Validity; 5.2 External Validity; 6. Analysis and Results; 6.1 General Descriptive Statistics; 6.2 Statistical Tests and Analysis; 6.2.1 Within-Subject Analysis on the complete data

6.2.2 Analysis for residual effects between the two ParticipantGroups6.2.3 Within-Subject Analysis on the two Participant Groups; 6.2.3.1 Participants that started with Groovy; 6.2.3.2 Participants that started with Java; 6.2.4 Exploratory Analysis of the Results based on Participants' Performance; 6.2.4.1 Participants that started with Groovy; 6.2.4.2 Participants that started with Java; 6.2.5 Hypotheses and Task based Analysis; 6.2.5.1 Tasks 1, 2, 3, 6 and 8; 6.2.5.2 Hypothesis 2-1 and Tasks 7 and 9; 6.2.5.3 Hypothesis 2-2 and Tasks 4 and 5; 7. Summary and Discussion; 7.1 Final Remarks

7.2 Result Summary

Sommario/riassunto

Hauptbeschreibung Programming languages that use the object-oriented approach have been around for quite a while now. Most of them use either a static or a dynamic type system. However, both types are very common in the industry. But, in spite of their common use in science and practice, only very few scientific studies have tried to evaluate the two type systems'' usefulness in certain scenarios. There are arguments for both systems. For example, static type systems are said to aid the programmer in the prevention of type errors, and further, they provide documentation help for, there is an e
