

1.	Record Nr.	UNINA990008793020403321
	Titolo	Configuring juniper networks Netscreen & SSG firewalls / Rob Cameron, technical editor ; Brad Woodberg ... [et al.]
	Pubbl/distr/stampa	Rockland (MA) : Syngress, ©2007
	ISBN	978-1-59749-118-1
	Descrizione fisica	xiii, 745 p. : ill. ; 25 cm
	Disciplina	005.822
	Locazione	SC1
	Collocazione	005.8-CAM-1
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
2.	Record Nr.	UNINA9910786268303321
	Autore	Friedman John L. <1945->
	Titolo	Rotating relativistic stars // John L. Friedman, University of Wisconsin, Milwaukee and Nikolaos Stergioulas, Aristotle University of Thessaloniki [[electronic resource]]
	Pubbl/distr/stampa	Cambridge : , : Cambridge University Press, , 2013
	ISBN	1-107-30108-4 1-107-23362-3 0-511-97759-X 1-107-31391-0 1-107-30616-7 1-107-30541-1 1-299-39904-5 1-107-31171-3 1-107-30836-4
	Descrizione fisica	1 online resource (xxiv, 409 pages) : digital, PDF file(s)
	Collana	Cambridge monographs on mathematical physics
	Classificazione	SCI005000
	Disciplina	523.8/874
	Soggetti	Neutron stars Stellar oscillations Gravitational waves Stars - Rotation

Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Title from publisher's bibliographic system (viewed on 05 Oct 2015).
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	1. Stationary, axisymmetric equilibria -- 2. 3+1 split, action, Lagrangian and Hamiltonian formalisms -- 3. Asymptotics, virial identities and nonaxisymmetric equilibria -- 4. Numerical schemes -- 5. Equilibrium models -- 6. Approximation methods for equilibria -- 7. Perturbation theory of relativistic fluids -- 8. Quasinormal modes -- 9. Stellar stability -- 10. Nonlinear dynamics of rotating relativistic stars -- Appendix A: Lie derivatives, forms, densities, and integration -- Appendix B: The Newtonian limit of the two-potential.
Sommario/riassunto	<p>The masses of neutron stars are limited by an instability to gravitational collapse and an instability driven by gravitational waves limits their spin. Their oscillations are relevant to x-ray observations of accreting binaries and to gravitational wave observations of neutron stars formed during the coalescence of double neutron-star systems. This volume includes more than forty years of research to provide graduate students and researchers in astrophysics, gravitational physics and astronomy with the first self-contained treatment of the structure, stability and oscillations of rotating neutron stars. This monograph treats the equations of stellar equilibrium; key approximations, including slow rotation and perturbations of spherical and rotating stars; stability theory and its applications, from convective stability to the r-mode instability; and numerical methods for computing equilibrium configurations and the nonlinear evolution of their oscillations. The presentation of fundamental equations, results and applications is accessible to readers who do not need the detailed derivations.</p>
