Sun and Joanne Kurtzberg -- Disorders of the fetomaternal unit / Eric J. Werner, Nancy C. Chescheir, and Randall G. Fisher -- Neonatal oncology / Alan S. Gamis and Michelle Manalang -- Reference ranges in neonatal hematology / Robert D. Christensen.

Sommario/riassunto

Neonatal hematology is a fast-growing field, and hematologic problems occur in the majority of sick neonates. Focusing on clinical issues and problem-solving, this is a fully revised and updated revision of a successful practical guide to the pathogenesis, recognition and management of hematologic problems in the neonate. The second edition begins with chapters on the history of neonatal hematology, hematopoiesis, and the immunologic system. Subsequent sections are devoted to erythrocyte disorders, platelet disorders, leucocyte disorders, immunologic disorders and hemostatic disorders. New to this edition are an expanded coverage of neonatal oncology, cord blood utilization, neonatal screening, prenatal diagnosis and hyperbilirubinemia. Written by practising physicians specializing in pediatric hematology, neonatology, immunology, pediatric infectious disease and transfusion medicine, this is an essential text for pediatric hematologists, NICU specialists, neonatologists and neonatal nurse practitioners.

Sommario/riassunto	Grounded in theory and research, this book offers a spatial perspective on how and why populations are regulated and disciplined by mass violence?and why these questions matter for scholars concerned about social justice. James Tyner focuses on how states and other actors use acts of brutality to manage, administer, and control space for political and economic purposes. He shows how demographic analyses of fertility, mortality, and migration cannot be complete without taking war and genocide into account. Stark, in-depth case studies provide a powerful and
