

1. Record Nr.	UNINA9910716194903321
Titolo	Pensions and increase of pensions for certain soldiers and sailors of the regular Army and Navy, etc. February 26, 1926. -- Ordered to be printed
Pubbl/distr/stampa	[Washington, D.C.] : , : [U.S. Government Printing Office], , 1926
Descrizione fisica	1 online resource (130 pages)
Collana	Senate report / 69th Congress, 1st session. Senate ; ; no. 223 [United States congressional serial set ] ; ; [serial no. 8530]
Altri autori (Persone)	DalePorter H <1867-1933> (Porter Hinman), (Republican (VT))
Soggetti	Claims Indians of North America - Wars Legislative amendments Military pensions Survivors' benefits Mexican War, 1846-1848 Spanish-American War, 1898 Legislative materials. Philippines History Revolution, 1896-1898
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Batch processed record: Metadata reviewed, not verified. Some fields updated by batch processes. FDLP item number not assigned.

| Sommario/riassunto      | Multitasking refers to performance of multiple tasks. The most prominent types of multitasking are situations including either temporal overlap of the execution of multiple tasks (i.e., dual tasking) or executing multiple tasks in varying sequences (i.e., task switching). In the literature, numerous attempts have aimed at theorizing about the specific characteristics of executive functions that control interference between simultaneously and/or sequentially active component of task-sets in these situations. However, these approaches |

have been rather vague regarding explanatory concepts (e.g., task-set inhibition, preparation, shielding, capacity limitation), widely lacking theories on detailed mechanisms and/ or empirical evidence for specific subcomponents. The present research topic aims at providing a selection of contributions on the details of executive functioning in dual-task and task switching situations. The contributions specify these executive functions by focusing on (1) fractionating assumed mechanisms into constituent subcomponents, (2) their variations by age or in clinical subpopulations, and/ or (3) their plasticity as a response to practice and training.
