Sommario/riassunto	In seventeenth-century France, aristocratic women were valued by their families as commodities to be married off in exchange for money, social advantage, or military alliance. Once married, they became legally subservient to their husbands. The duchesse de Montpensier-a first cousin of Louis XIV-was one of very few exceptions, thanks to the vast wealth she inherited from her mother, who died shortly after Montpensier was born. She was also one of the few politically powerful women in France at the time to have been an accomplished writer. In

the daring letters presented in this bilingual edition, Montpensier condemns the alliance system of marriage, proposing instead to found a republic that she would govern, "a corner of the world in which . . . women are their own mistresses," and where marriage and even courtship would be outlawed. Her pastoral utopia would provide medical care and vocational training for the poor, and all the homes would have libraries and studies, so that each woman would have a "room of her own" in which to write books. Joan DeJean's lively introduction and accessible translation of Montpensier's letters-four previously unpublished-allow us unprecedented access to the courageous voice of this extraordinary woman.

Sommario/riassunto

In the field of organic semiconductors researchers and manufacturers are faced with a wide range of potential molecules. This work presents concepts for simulation-based predictions of material characteristics starting from chemical structures. The focus lies on charge transport - be it in microscopic models of amorphous morphologies, lattice models or large-scale device models. An extensive introductory review, which also includes experimental techniques, makes this work interesting for a broad readership.
