| Sommario/riassunto | This book is dedicated to the applications of nanobiotechnology, i.e. the way that nanotechnology is used to create devices to study |

biological systems and phenomena. It includes seven chapters, organized in two sections. The first section (Chapters 1-5) covers a large spectrum of issues associated with nanoparticle synthesis, nanoparticle toxicity, and the role of nanotechnology in drug delivery, tissue engineering, agriculture, and biosensing. The second section (Chapters 6 and 7) is devoted to the properties of nanofluids and the medical and biological applications of computational fluid dynamics modeling.
