**Sommario/riassunto**

Accounting in Networks is the first book that in a comprehensive way covers the emerging issue of accounting and control in horizontal relations across legally independent organizations. During the last 20 years, organisations have shown an increased interest in collaborations that cross company boundaries. New organisational forms, such as alliances, partnerships, joint ventures, outsourcing and networks have received increased attention. This development has pushed management accounting researchers into examining the lateral effects of accounting. This book examines these lateral

## Sommario/riassunto

Scholarship on early Chinese thought has long tended to treat texts as mere repositories of ideas rather than as meaningful objects in their own right. Not only does this approach present an idealised account of China's intellectual past, but it also imposes artificial boundaries between textual and philosophical traditions. As the first study to treat text as a cultural phenomenon during the Warring States period, this book demonstrates the interplay among the material conditions of text and manuscript culture, writing, and thought. Through close readings of philosophical texts excavated at Gudiàn, it analyses crucial strategies of meaning construction and casts light on the ways in which different communities used texts to philosophical ends. Meyer thus establishes new understandings of the correlation between ideas, their material carrier, and the production of meaning in early China.
