Titolo	Decarbonization and Circular Economy in the Sustainable Development and Renovation of Buildings and Neighborhoods
Pubbl/distr/stampa	Basel, Switzerland, : MDPI - Multidisciplinary Digital Publishing Institute, 2020
Descrizione fisica	1 electronic resource (282 p.)
Soggetti	History of engineering & technology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	<p>In recent years, the building sector has been turning towards intervening in the existing city building stock. In fact, it is generally accepted that the refurbishment of buildings and urban regeneration based on sustainability must form the axis of reformulation of the building sector. At present, achieving sustainable urban development inevitably involves improving existing buildings, thereby preventing the need for city growth, and for the emptying of established neighborhoods. Furthermore, considering the whole life cycle, the great amount of greenhouse emissions derived from the construction sector is well known; thus, in order to reach a decarbonized society, it is important to provide eco-efficient construction materials and solutions, adding the principles of the circular economy and resource efficiency. Therefore, the theme of this Special Issue is the “Decarbonization and Circular Economy in the Sustainable Development and Renovation of Buildings and Neighborhoods” in response to the objectives not only raised in the Horizon 2020 but by all the people who seek a more sustainable world. This Special Issue of Sustainability focuses on, but is not limited to:</p> <ul style="list-style-type: none"> • Obtaining an overview of the environmental problems that arise from construction activity, focusing on refurbishment as an alternative to the current crisis in the construction sector, as well as on actions designed to minimize environmental effects on the environment; • Searching for new alternatives to conventional

construction solutions that minimize the environmental impact of the construction activity, improve indoor environmental quality of buildings, build or refurbish, always from a rentable and optimal cost in time, and implement a circular economy and an efficient resource and waste management; • Minimizing the consumption of material resources, energy consumption and CO2 emissions in construction and looking for the proper management of construction and demolition waste and the opportunities for their recycling and reuse; • Sustainable planning and urban development, for an ordered and sustainable growth.

Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	(http://www.ilibri.casalini.it/toc/10818677.pdf)
Sommario/riassunto	This book, the result of a lengthy labour of cataloguing and research, continues the indexing and recording of the unpublished epistolary material conserved in the Dessi fond, launched in 2003 by Chiara Andrei with the edition of the family correspondence (Firenze, FUP). Now, through 1,900 letters from friends and readers, Francesca Nencioni offers a different and more ample overview of the fundamental stages in the life and works of the writer, focusing above

all on the years of his university training in Pisa. Of particular interest is the appendix of carefully annotated unpublished texts, which offers 19 letters from Dessì to friends and scholars, the complete two-way correspondence with Walter Binni, and the letters sent to the friend and disciple of the great historian, Delio Cantimori. Press reviews:
26/10/2009: Dessì e la voce "lontana e bianca" del 1955 12/2009:
"L'immaginazione" n. 251
