Soggetti	Criminal behavior Criminal law - Ethics Forensic neurology Brain - Research
Lingua di pubblicazione	Tedesco
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Sommario/riassunto	In recent years, the debate about the free will has gained intensity. The phase of the heated debate has become a more pertinent and interdisciplinary. But still there are misunderstandings, misconceptions or ambiguities, which are sometimes accompanied by an attitude of denial discourse. This volume helps to highlight the self-perceptions and views of the concerned disciplines: Philosophy and Neuroscience, criminal science and criminal law practice, and not least the Forensic Psychiatry. The book does not claim to present definitive answers but provides clarifications that allow the interested reader to form an reflected opinion. The contributions have come from the first workshop of the Institute of Criminal Sciences at the Georg-August-Universität Göttingen in 2007.
