| Sommario/riassunto      | From 1989 to 1994, more than 200 m <sup>2</sup> were excavated at the Saqqaq<br>site of Nipisat, situated on a small island 15 km south of Sisimiut. The<br>excellent preservation conditions for organic material, and the fact that<br>some of the stone artefacts were not previously known from the Saqqaq<br>Culture, were the main reasons for the excavation. More than 70,000<br>bone fragments, 20,000 flakes and 1,000 artefacts were recovered. |
