Sommario/riassunto	With Mutual Aid. A Factor in Evolution (1902), Darwinian scientist and anarchist theorist Pierre Kropotkine tried to establish that mutual aid was a factor in evolution as much if not more important than competition. The evolution could not be reduced to the survival of the fittest in a Malthusian setting. But if there is an intra-specific mutual aid in nature, what about inter-specific relationships, and between organisms in general and the environment?
