Nota di bibliografia	Includes bibliographical references.
Sommario/riassunto	Qhapaq Ñan, refers to a network of roads built during the time of the great Inca empire. Almost 55,000 kilometres long this net of roads extended across the entire geographical area of the Inca. The Thesis, that guides this study, is that selected parts of the Qhapaq Ñan could be used for touristic use, presuming this tourism follows sustainable criteria. Not mass tourism but rather innovative programs with a concept that focuses on the balance between “use and protection” of these sensitive areas, will be essential., operated by the local communities could be the right way.

## Sommario/riassunto

This book introduces “biolaw” as an integrated and distinct field in contemporary legal studies. Corresponding to the legal dimension of bioethics, the term “biolaw” is already in use in academic and research activities to denote legal issues emerging mostly from advanced technological applications. This book is a genuine attempt to rationalize the field of biolaw after almost four decades of continuous production of relevant legislation and judgments worldwide. This experience is a robust basis for defending a) a separate legal object, covering the total of legal norms that govern the management of life as a natural phenomenon in all its possible forms, and b) an “evolutionary” approach that opens the discussion on a future conciliation of legal regulation with the Theory of Evolution on the ground of biolaw.
