

1. Record Nr.	UNINA9910131638103321
Autore	Meunier Quentin
Titolo	Les arbres utiles du Gabon // Quentin Meunier, Carl Moumbogou, Jean-Louis Doucet
Pubbl/distr/stampa	Gembloux, : Uliège Library, 2015 France : , : Les Presses agronomiques de Gembloux, , 2015
Descrizione fisica	1 online resource (340 pages) : illustrations (colour); digital, PDF file(s)
Soggetti	Trees - Utilization - Gabon Trees - Geographical distribution - Gabon Trees - Gabon Plants, Useful - Gabon Forest plants - Gabon Plants - Gabon Plant Geography Botany Earth & Environmental Sciences
Lingua di pubblicazione	Francese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references.
Sommario/riassunto	The Gabonese forest includes several hundred species of trees. A handful are well known, many are far less so, and some are still anonymous. This guide takes you to discover 37 botanical families and 225 species, of which more than 140 are illustrated. It allows you to identify and learn more about them using simple diagrams and nearly 1,000 colour photographs of botanical details. For the more experienced, new data concerning ecology will consolidate their knowledge. The objective of this work is the sharing and popularization of knowledge, so that the agents of the administrations in charge of forests, just like the loggers or the local populations, can better understand and manage these useful species.
