1.	Record Nr.	UNINA9910131642403321
	Autore	Beranger Jerome
	Titolo	Medical information systems ethics / / Jerome Beranger
	Pubbl/distr/stampa	London, England ; ; Hoboken, New Jersey : , : ISTE : , : Wiley, , 2015 ©2015
	ISBN	1-119-17826-6 1-119-17824-X 1-119-17822-3
	Edizione	[1st edition]
	Descrizione fisica	1 online resource (301 p.)
	Collana	Information Systems, Web and Pervasive Computing Series
	Disciplina	610.285
	Soggetti	Medical informatics - Moral and ethical aspects - France Medical records - Access control - Moral and ethical aspects - France Medicine - Data processing - Moral and ethical aspects - France
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Description based upon print version of record.
	Nota di bibliografia	Includes bibliographical references and index.
	Nota di contenuto	Cover; Title Page; Copyright; Contents; Introduction; I.1. Questions on which our study is based; I.2. Objectives and contributions of this book; I.3. Toward medical ethics; I.3.1. Sources that feed our ethical reflections; I.3.2. The Hippocratic Oath at the root of medical ethics; I.3.3. Ethical reflection centered on principles and adjusted by rules; I.3.3.1. Four universal ethical principles; I.3.3.2. Six ethical rules; 1: The Emergence of Medical Information in the Face of Personal and Societal Ethical Challenges; 1.1. An information-consuming society 1.2. e-Health, m-health, the Quantified Self and Big Data 1.3. Medical secrecy in the face of the computerization of healthcare data; 1.3.1. Regulatory characteristics of medical secrecy; 1.3.2. Protection of healthcare data; 1.4. Cultural evolution of mentalities surrounding legitimacy of information; 1.5. Processing of personal data in law; 1.5.1. European regulations concerning the processing of medical data; 1.5.1.1. Directive 95/46 CE of the European Parliament and Council; 1.5.1.2. European and EU instruments protecting private life 1.5.2. American legal framework surrounding personal healthcare data 1.5.3. Laws pertaining to personal data in Asia; 1.5.3.1. In Japan; 1.5.3.2. In China; 2: Ethical Modeling: From the Design to the Use of an

Information System; 2.1. Info-ethics: data on practical wisdom; 2.1.1. Epistemological illumination around the pyramid of knowledge; 2.1.2. From data to knowledge through an information system; 2.1.3. Quality and choice of medical information; 2.1.3.1. Indicators of data quality; 2.1.3.2. Criteria for improving the quality of medical information
2.2. Identification of method used to develop the ethical analysis model
2.3. Development of the ethical analysis space; 2.4. Presentation of the ethical model; 2.4.1. Ethical cube of an accepted contingency; 2.4.2. Ethical model of information system in the doctor-patient relationship; 2.4.3. Ethical modeling of medical communication; 2.4.4. Process of creation of practical wisdom via neo-Platonic systemic ethical modeling; 2.4.5. Ethical inductive algorithmic governance (, G,); 2.4.6. Toward a selective ranking of medical data; 3: Uses of this Ethical Model
3.1. Implementing the ethical model 3.1.1. Implementing the model on the major aims of an information system; 3.1.2. Implementation of the model in the general creation of an information system; 3.2. Presentation of the study's questionnaires; 3.3. Necessary environmental changes for healthcare information systems: recommendations and actions; 3.3.1. From a structural and technological perspective; 3.3.2. From a strategic and methodological perspective; 3.3.3. From an organizational and regulatory perspective; 3.3.4. From a relational and cultural perspective
3.4. Creating an ethical charter on the "ideal" computational tool for a healthcare establishment

Sommario/riassunto	The exponential digitization of medical data has led to a transformation of the practice of medicine. This change notably raises a new complexity of issues surrounding health IT. The proper use of these communication tools, such as telemedicine, e-health, m-health the big medical data, should improve the quality of monitoring and care of patients for an information system to ""human face"". Faced with these challenges, the author analyses in an ethical angle the patient-physician relationship, sharing, transmission and storage of medical information, setting pins to an ethic for the digitiz
