

1. Record Nr.	UNINA9910132638103321
Autore	Gabrys Jennifer
Titolo	Digital Rubbish : A Natural History of Electronics / / Jennifer Gabrys
Pubbl/distr/stampa	University of Michigan Press, 2011 Ann Arbor : , : University of Michigan Press, , 2011 ©2011
ISBN	9780472900299 0472900293 9780472117611 0472117610
Descrizione fisica	1 online resource : illustrations; digital, HTML file(s)
Collana	digitalculturebooks
Classificazione	SCI026000SOC000000SOC052000
Disciplina	363.72/88
Soggetti	Electronic apparatus and appliances - History Electronic waste
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references (p. 201-219) and index.
Nota di contenuto	Introduction : a natural history of electronics --Silicon elephants : the transformative materiality of microchips --Ephemeral screens : exchange at the interface --Shipping and receiving : circuits of disposal and the "social death" of electronics --Museum of failure : the mutability of electronic memory --Media in the dump : salvage stories and spaces of remainder -- Conclusion : digital rubbish theory.
Sommario/riassunto	This is a study of the material life of information and its devices; of electronic waste in its physical and electronic incarnations; a cultural and material mapping of the spaces where electronics in the form of both hardware and information accumulate, break down, or are stowed away. Electronic waste occurs not just in the form of discarded computers but also as a scatter of information devices, software, and systems that are rendered obsolete and fail. Where other studies have addressed ""digital"" technology through a focus on its immateriality or virtual qualities, Gabrys traces the material, spatial, cultural, and political infrastructures that enable the emergence and dissolution of these technologies. In the course of her book, she explores five interrelated ""spaces"" where electronics fall apart: from Silicon Valley

to Nasdaq, from containers bound for China to museums and archives that preserve obsolete electronics as cultural artifacts, to the landfill as material repository. All together, these sites stack up into a sedimentary record that forms the "natural history" of this study. *Digital Rubbish: A Natural History of Electronics* describes the materiality of electronics from a unique perspective, examining the multiple forms of waste that electronics create as evidence of the resources, labor, and imaginaries that are bundled into these machines. By drawing on the material analysis developed by Walter Benjamin, this natural history method allows for an inquiry into electronics that focuses neither on technological progression nor on great inventors but rather considers the ways in which electronic technologies fail and decay. Ranging across studies of media and technology, as well as environments, geography, and design, Jennifer Gabrys pulls together the far-reaching material and cultural processes that enable the making and breaking of these technologies.
