

1. Record Nr.	UNINA9910132669003321
Autore	Otway Thomas H
Titolo	The Dirichlet problem for elliptic-hyperbolic equations of Keldysh type // Thomas H. Otway
Pubbl/distr/stampa	Berlin ; ; Heidelberg ; ; New York, : Springer Verlag, 2012
ISBN	9783642244155 3642244157
Edizione	[1st ed. 2012.]
Descrizione fisica	1 online resource (IX, 214 p. 26 illus., 11 illus. in color.)
Collana	Lecture notes in mathematics ; ; 2043
Classificazione	MAT 354f MAT 355f MAT 357f SI 850
Disciplina	515.3533
Soggetti	Differential equations, Elliptic Differential equations, Hyperbolic Dirichlet problem
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	1 Introduction -- 2 Mathematical Preliminaries -- 3 The Equation of Cinquini-Cibrario -- 4 The Cold Plasma Model -- 5 Light near a Caustic -- 6 Projective Geometry.
Sommario/riassunto	Partial differential equations of mixed elliptic-hyperbolic type arise in diverse areas of physics and geometry, including fluid and plasma dynamics, optics, cosmology, traffic engineering, projective geometry, geometric variational theory, and the theory of isometric embeddings. And yet even the linear theory of these equations is at a very early stage. This text examines various Dirichlet problems that can be formulated for Keldysh-type equations, one of the two main classes of linear elliptic-hyperbolic equations. Open boundary conditions (in which data are prescribed on only part of the boundary) and closed boundary conditions (in which data are prescribed on the entire boundary) are both considered. Emphasis is placed on the formulation of boundary conditions for which solutions can be shown to exist in an appropriate function space, and specific applications to plasma physics, optics, and analysis on projective spaces are discussed.
