Sommario/riassunto	Publishes articles on the following topics: immunogenetics of cell surface antigens; ontogeny and phylogeny of the immune system; immunogenetics of cell interactions; functional aspects of cell surface molecules and their natural ligands, such as cytokines, adhesion molecules and activation antigens; role of tissue antigens in immune reactions in vitro and in vivo, including experimental and clinical transplantation; and relationships between normal tissue antigens and tumor-associated antigens. The journal emphasizes genetic control of

immune response, disease susceptibility and genetics, biochemistry  
and molecular biology of alloantigens and leukocyte differentiation.
