

1. Record Nr.	UNINA9910133594103321
Autore	Jin Jian-Ming <1962->
Titolo	Theory and computation of electromagnetic fields / / Jian-Ming Jin
Pubbl/distr/stampa	Hoboken, New Jersey : , : Wiley, , c2010 [Piscataqay, New Jersey] : , : IEEE Xplore, , [2010]
ISBN	1-283-91788-2 0-470-87386-8 1-118-08811-5 0-470-87425-2
Descrizione fisica	1 online resource (618 p.)
Disciplina	530.14/1 530.141
Soggetti	Electromagnetic fields - Mathematics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	PREFACE -- ACKNOWLEDGMENTS -- PART I ELECTROMAGNETIC FIELD THEORY -- CHAPTER 1 BASIC ELECTROMAGNETIC THEORY -- 1.1 Review of Vector Analysis -- 1.1.1 Vector Operations and Integral Theorems -- 1.1.2 Symbolic Vector Method -- 1.1.3 Helmholtz Decomposition Theorem -- 1.1.4 Green's Theorems -- 1.2 Maxwell's Equations in Terms of Total Charges and Currents -- 1.2.1 Maxwell's Equations in Integral Form -- 1.2.2 Maxwell's Equations in Differential Form -- 1.2.3 Current Continuity Equation -- 1.2.4 The Lorentz Force Law -- 1.3 Constitutive Relations -- 1.3.1 Electric Polarization -- 1.3.2 Magnetization -- 1.3.3 Electric Conduction -- 1.3.4 Classification of Media -- 1.4 Maxwell's Equations in Terms of Free Charges and Currents -- 1.5 Boundary Conditions -- 1.6 Energy, Power, and Poynting's Theorem -- 1.7 Time-Harmonic Fields -- 1.7.1 Time-Harmonic Fields -- 1.7.2 Fourier Transforms -- 1.7.3 Complex Power -- 1.7.4 Complex Permittivity and Permeability -- CHAPTER 2 ELECTROMAGNETIC RADIATION IN FREE SPACE -- 2.1 Scalar and Vector Potentials -- 2.1.1 Static Fields -- 2.1.2 Time-Harmonic Fields and the Lorenz Gauge Condition -- 2.2 Solution of Vector Potentials in Free Space -- 2.2.1 Delta Function and Green's Function -- 2.2.2 Green's

Function in Free Space -- 2.2.3 Field-Source Relations in Free Space --  
2.2.4 Why Use Auxiliary Potential Functions -- 2.2.5 Free-Space Dyadic  
Green's Functions -- 2.3 Electromagnetic Radiation in Free Space --  
2.3.1 Infinitesimal Electric Dipole -- 2.3.2 Finite Electric Dipole --  
2.3.3 Far-Field Approximation and the Sommerfeld Radiation Condition  
-- 2.3.4 Circular Current Loop and Magnetic Dipole -- 2.4 Radiation by  
Surface Currents and Phased Arrays -- 2.4.1 Radiation by a Surface  
Current -- 2.4.2 Radiation by a Phased Array -- CHAPTER 3  
ELECTROMAGNETIC THEOREMS AND PRINCIPLES -- 3.1 Uniqueness  
Theorem -- 3.2 Image Theory -- 3.2.1 Basic Image Theory -- 3.2.2  
Half-Space Field-Source Relations -- 3.3 Reciprocity Theorems --  
3.3.1 General Reciprocity Theorem.  
3.3.2 Lorentz Reciprocity Theorem -- 3.3.3 Rayleigh-Carson  
Reciprocity Theorem -- 3.4 Equivalence Principles -- 3.4.1 Surface  
Equivalence Principle -- 3.4.2 Application to Scattering by a Conducting  
Object -- 3.4.3 Application to Scattering by a Dielectric Object -- 3.4.4  
Volume Equivalence Principle -- 3.5 Duality Principle -- 3.6 Aperture  
Radiation and Scattering -- 3.6.1 Equivalent Problems -- 3.6.2  
Babinet's Principle -- 3.6.3 Complementary Antennas -- CHAPTER 4  
TRANSMISSION LINES AND PLANE WAVES -- 4.1 Transmission Line  
Theory -- 4.1.1 Governing Differential Equations and General Solutions  
-- 4.1.2 Reflection and Transmission -- 4.1.3 Green's Function and  
Eigenfunction Expansion -- 4.2 Wave Equations and General Solutions  
-- 4.2.1 Wave Equations and Solution by Separation of Variables --  
4.2.2 Characteristics of a Plane Wave -- 4.2.3 Wave Velocities and  
Attenuation -- 4.2.4 Linear, Circular, and Elliptical Polarizations --  
4.2.5 Wave Propagation in Metamaterials -- 4.3 Plane Waves Generated  
by A Current Sheet -- 4.4 Reflection and Transmission -- 4.4.1 Refl  
ection and Transmission at Normal Incidence -- 4.4.2 Refl ection and  
Transmission at Oblique Incidence -- 4.4.3 Total Transmission and  
Total Reflection -- 4.4.4 Transmission into a Left-Handed Medium --  
4.4.5 Plane Waves versus Transmission Lines -- 4.5 Plane Waves in  
Anisotropic and Bi-Isotropic Media -- 4.5.1 Plane Waves in Uniaxial  
Media -- 4.5.2 Plane Waves in Gyrotropic Media -- 4.5.3 Plane Waves in  
Chiral Media -- CHAPTER 5 FIELDS AND WAVES IN RECTANGULAR  
COORDINATES -- 5.1 Uniform Waveguides -- 5.1.1 General Analysis --  
5.1.2 General Characteristics -- 5.1.3 Uniform Rectangular Waveguide  
-- 5.1.4 Losses in Waveguides and Attenuation Constant -- 5.2  
Uniform Cavities -- 5.2.1 General Theory -- 5.2.2 Rectangular Cavity  
-- 5.2.3 Material and Geometry Perturbations -- 5.3 Partially Filled  
Waveguides and Dielectric Slab Waveguides -- 5.3.1 General Theory --  
5.3.2 Partially Filled Rectangular Waveguide -- 5.3.3 Dielectric Slab  
Waveguide on a Ground Plane.  
5.4 Field Excitation in Waveguides -- 5.4.1 Excitation by Planar Surface  
Currents -- 5.4.2 Excitation by General Volumetric Currents -- 5.5  
Fields in Planar Layered Media -- 5.5.1 Spectral Green's Function and  
Sommerfeld Identity -- 5.5.2 Vertical Electric Dipole above a Layered  
Medium -- 5.5.3 Horizontal Electric Dipole above a Layered Medium --  
5.5.4 Dipoles on a Grounded Dielectric Slab -- CHAPTER 6 FIELDS AND  
WAVES IN CYLINDRICAL COORDINATES -- 6.1 Solution of Wave  
Equation -- 6.1.1 Solution by Separation of Variables -- 6.1.2  
Cylindrical Wave Functions -- 6.2 Circular and Coaxial Waveguides and  
Cavities -- 6.2.1 Circular Waveguide -- 6.2.2 Coaxial Waveguide --  
6.2.3 Cylindrical Cavity -- 6.3 Circular Dielectric Waveguide -- 6.3.1  
Analysis of Hybrid Modes -- 6.3.2 Characteristics of Hybrid Modes --  
6.4 Wave Transformation and Scattering Analysis -- 6.4.1 Wave  
Transformation -- 6.4.2 Scattering by a Circular Conducting Cylinder  
-- 6.4.3 Scattering by a Circular Dielectric Cylinder -- 6.4.4 Scattering

by a Circular Multilayer Dielectric Cylinder -- 6.5 Radiation by Infinitely Long Currents -- 6.5.1 Line Current Radiation in Free Space -- 6.5.2 Radiation by a Cylindrical Surface Current -- 6.5.3 Radiation in the Presence of a Circular Conducting Cylinder -- 6.5.4 Radiation in the Presence of a Conducting Wedge -- 6.5.5 Radiation by a Finite Current -- CHAPTER 7 FIELDS AND WAVES IN SPHERICAL COORDINATES -- 7.1 Solution of Wave Equation -- 7.1.1 Solution by Separation of Variables -- 7.1.2 Spherical Wave Functions -- 7.1.3 TE and TM Modes -- 7.2 Spherical Cavity -- 7.3 Biconical Antenna -- 7.3.1 Infinitely Long Model -- 7.3.2 Finite Biconical Antenna -- 7.4 Wave Transformation and Scattering Analysis -- 7.4.1 Wave Transformation -- 7.4.2 Expansion of a Plane Wave -- 7.4.3 Scattering by a Conducting Sphere -- 7.4.4 Scattering by a Dielectric Sphere -- 7.4.5 Scattering by a Multilayer Dielectric Sphere -- 7.5 Addition Theorem and Radiation Analysis -- 7.5.1 Addition Theorem for Spherical Wave Functions. 7.5.2 Radiation of a Spherical Surface Current -- 7.5.3 Radiation in the Presence of a Sphere -- 7.5.4 Radiation in the Presence of a Conducting Cone -- PART II ELECTROMAGNETIC FIELD COMPUTATION -- CHAPTER 8 THE FINITE DIFFERENCE METHOD -- 8.1 Finite Differencing Formulas -- 8.2 One-Dimensional Analysis -- 8.2.1 Solution of the Diffusion Equation -- 8.2.2 Solution of the Wave Equation -- 8.2.3 Stability Analysis -- 8.2.4 Numerical Dispersion Analysis -- 8.3 Two-Dimensional Analysis -- 8.3.1 Analysis in the Time Domain -- 8.3.2 Analysis in the Frequency Domain -- 8.4 Yee's FDTD Scheme -- 8.4.1 Two-Dimensional Analysis -- 8.4.2 Three-Dimensional Analysis -- 8.5 Absorbing Boundary Conditions -- 8.5.1 One-Dimensional ABC -- 8.5.2 Two-Dimensional ABCs -- 8.5.3 Perfectly Matched Layers -- 8.6 Modeling of Dispersive Media -- 8.6.1 Recursive Convolution Approach -- 8.6.2 Auxiliary Differential Equation Approach -- 8.7 Wave Excitation and Far-Field Calculation -- 8.7.1 Modeling of Wave Excitation -- 8.7.2 Near-to-Far Field Transformation -- 8.8 Summary -- CHAPTER 9 THE FINITE ELEMENT METHOD -- 9.1 Introduction to the Finite Element Method -- 9.1.1 The General Principle -- 9.1.2 One-Dimensional Example -- 9.2 Finite Element Analysis of Scalar Fields -- 9.2.1 The Boundary-Value Problem -- 9.2.2 Finite Element Formulation -- 9.2.3 Application Examples -- 9.3 Finite Element Analysis of Vector Fields -- 9.3.1 The Boundary-Value Problem -- 9.3.2 Finite Element Formulation -- 9.3.3 Application Examples -- 9.4 Finite Element Analysis in the Time Domain -- 9.4.1 The Boundary-Value Problem -- 9.4.2 Finite Element Formulation -- 9.4.3 Application Examples -- 9.5 Absorbing Boundary Conditions -- 9.5.1 Two-Dimensional ABCs -- 9.5.2 Three-Dimensional ABCs -- 9.5.3 Perfectly Matched Layers -- 9.6 Some Numerical Aspects -- 9.6.1 Mesh Generation -- 9.6.2 Matrix Solvers -- 9.6.3 Higher-Order Elements -- 9.6.4 Curvilinear Elements -- 9.6.5 Adaptive Finite Element Analysis -- CHAPTER 10 THE METHOD OF MOMENTS. 10.1 Introduction to the Method of Moments -- 10.2 Two-Dimensional Analysis -- 10.2.1 Formulation of Integral Equations -- 10.2.2 Scattering by a Conducting Cylinder -- 10.2.3 Scattering by a Conducting Strip -- 10.2.4 Scattering by a Homogeneous Dielectric Cylinder -- 10.3 Three-Dimensional Analysis -- 10.3.1 Formulation of Integral Equations -- 10.3.2 Scattering and Radiation by a Conducting Wire -- 10.3.3 Scattering by a Conducting Body -- 10.3.4 Scattering by a Homogeneous Dielectric Body -- 10.3.5 Scattering by an Inhomogeneous Dielectric Body -- 10.4 Analysis of Periodic Structures -- 10.4.1 Scattering by a Planar Periodic Conducting Patch Array -- 10.4.2 Scattering by a Discrete Body-of-Revolution Object -- 10.5 Analysis of Microstrip Antennas and Circuits -- 10.5.1 Formulation of

Integral Equations -- 10.5.2 The Moment-Method Solution -- 10.5.3  
 Evaluation of Green's Functions -- 10.5.4 Far-Field Calculation and  
 Application Examples -- 10.6 The Moment Method in the Time Domain  
 -- 10.6.1 Time-Domain Integral Equations -- 10.6.2 Marching-On-in-  
 Time Solution -- 10.7 Summary -- CHAPTER 11 FAST ALGORITHMS  
 AND HYBRID TECHNIQUES -- 11.1 Introduction to Fast Algorithms --  
 11.2 Conjugate Gradient-FFT Method -- 11.2.1 Scattering by a  
 Conducting Strip or Wire -- 11.2.2 Scattering by a Conducting Plate --  
 11.2.3 Scattering by a Dielectric Object -- 11.3 Adaptive Integral  
 Method -- 11.3.1 Planar Structures -- 11.3.2 Three-Dimensional  
 Objects -- 11.4 Fast Multipole Method -- 11.4.1 Two-Dimensional  
 Analysis -- 11.4.2 Three-Dimensional Analysis -- 11.4.3 Multilevel  
 Fast Multipole Algorithm -- 11.5 Adaptive Cross-Approximation  
 Algorithm -- 11.5.1 Low-Rank Matrix -- 11.5.2 Adaptive Cross-  
 Approximation -- 11.5.3 Application to the Moment-Method Solution  
 -- 11.6 Introduction to Hybrid Techniques -- 11.7 Hybrid Finite  
 Difference-Finite Element Method -- 11.7.1 Relation between FETD and  
 FDTD -- 11.7.2 Hybridization of FETD and FDTD -- 11.7.3 Application  
 Example -- 11.8 Hybrid Finite Element-Boundary Integral Method.  
 11.8.1 Traditional Formulation -- 11.8.2 Symmetric Formulation --  
 11.8.3 Numerical Examples -- 11.9 Summary -- CHAPTER 12  
 CONCLUDING REMARKS ON COMPUTATIONAL ELECTROMAGNETICS --  
 12.1 Overview of Computational Electromagnetics -- 12.1.1  
 Frequency- versus Time-Domain Analysis -- 12.1.2 High-Frequency  
 Asymptotic Techniques -- 12.1.3 First-Principle Numerical Methods --  
 12.1.4 Time-Domain Simulation Methods -- 12.1.5 Hybrid Techniques  
 -- 12.2 Applications of Computational Electromagnetics -- 12.3  
 Challenges in Computational Electromagnetics -- References --  
 APPENDIX -- Vector Identities -- Integral Theorems -- Coordinate  
 Transformation -- INDEX.

## Sommario/riassunto

A unique textbook for both entry- and advanced-level graduate  
 coursework. Theory and Computation of Electromagnetic Fields doubles  
 as a textbook for both an entry-level graduate course on  
 electromagnetics and an advanced-level graduate course on  
 computational electromagnetics. It presents the fundamental concepts  
 in a systematic manner so that students can advance from the first  
 course to the second with little difficulty. The book consists of two  
 parts. Part I covers the standard basic electromagnetic theory in a  
 different manner than most texts; the contents cover both fundamental  
 theories (such as vector analysis, Maxwell's equations and boundary  
 conditions, and transmission line theory) and advanced topics (such as  
 wave transformation, addition theorems, and fields in layered media) in  
 order to benefit students at all levels. Part II covers major  
 computational methods for numerical analysis of electromagnetic fields  
 for engineering applications. These methods include the finite  
 difference method (and the finite difference time-domain method in  
 particular), the finite element method, and the integral-equation-based  
 moment method. Additional benefits of Theory and Computation of  
 Electromagnetic Fields include: Maxwell's equations as the starting  
 point for the treatment of every subject. Added coverage of fast  
 algorithms for solving integral equations and hybrid techniques for  
 combining different numerical methods to seek more efficient solutions  
 to complicated electromagnetic problems. Material designed for  
 classroom teaching and self-learning in two semesters, and tested over  
 fifteen years at the University of Illinois. Homework problems in every  
 chapter to test and reinforce understanding of course material.  
 Accompanying Instructor's Guide. Theory and Computation of  
 Electromagnetic Fields serves as a textbook for entry- and advanced-

level graduate electrical engineering students. It is also an ideal reference for professional engineers who wish to brush up on their analysis and computation skills.
