

1. Record Nr.	UNINA9910134010603321
Autore	Elio Nenci
Titolo	Bernardino Baldi's <i>In mechanica Aristotelis problemata exercitationes</i>
Pubbl/distr/stampa	Edition Open Access, 2011
Descrizione fisica	1 online resource (376 p.)
Collana	Sources 3: Max Planck Research Library for the History and Development of Knowledge
Altri autori (Persone)	Nenci, Elio
Soggetti	Biography and non-fiction prose
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	<p><i>In mechanica Aristotelis problemata exercitationes</i> written by Bernardino Baldi is reprinted with an introduction and commentary as the third volume of the series <i>Sources of the Max Planck Research Library for the History and Development of Knowledge</i>. The volume is also freely available in electronic form as an open-access publication on the Internet at <a href="http://www.edition-open-access.de">www.edition-open-access.de</a>. The <i>Exercitationes</i> were first published in 1621, four years after the death of the author. The work belongs to the long tradition of studies on the pseudo-Aristotelian <i>Mechanical Problems</i> developed during the Renaissance but, unlike most other works written during the sixteenth century, it takes a critical position against the theoretical approach of the pseudo-Aristotelian text. The <i>Exercitationes</i> display a systematic application of Archimedean principles to the explanation of the questions discussed in <i>Mechanical Problems</i> illustrating the patchwork character of preclassical mechanics. Moreover, Baldi's work presents lengthy digressions that considerably widen the boundaries of mechanics.</p>
