

1.	Record Nr.	UNINA9910134281103321
	Titolo	Seneca and Elizabethan tragedy
	Pubbl/distr/stampa	Cambridge Cambridge Univ. Press
	Altri autori (Persone)	Lucas, Frank Laurence
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
2.	Record Nr.	UNINA9910957442103321
	Titolo	The IMS : IP multimedia concepts and services in the mobile domain / / Miikka Poikselka ... [et al.]
	Pubbl/distr/stampa	Chichester, : John Wiley & Sons, c2004
	ISBN	9786610273904 9781280273902 1280273909 9780470871140 0470871148 9780470871157 0470871156
	Edizione	[1st ed.]
	Descrizione fisica	1 online resource (449 p.)
	Altri autori (Persone)	PoikselkaMiikka
	Disciplina	004.62
	Soggetti	Computer network protocols Internet telephony Multimedia systems
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Description based upon print version of record.
	Nota di bibliografia	Includes bibliographical references and index.

Contents; Foreword; Preface; Acknowledgements; List of Figures; List of Tables; PART I: ARCHITECTURE; 1 Introduction; 1.1 Why the Internet Protocol Multimedia Subsystem was developed; 1.2 Where did it come from?; 1.3 Other relevant standardization bodies; 2 IP Multimedia Subsystem Architecture; 2.1 Architectural requirements; 2.2 Description of IMS-related entities and functionalities; 2.3 IMS reference points; 3 IMS Concepts; 3.1 Overview; 3.2 Registration; 3.3 Session initiation; 3.4 Identification; 3.5 Identity modules; 3.6 Security services in the IMS; 3.7 Discovering the IMS entry point; 3.8 S-CSCF assignment; 3.9 Mechanism for controlling bearer traffic; 3.10 Charging; 3.11 User profile; 3.12 Service provision; 3.13 Connectivity between traditional Circuit-Switched users and IMS users; 3.14 Mechanism to register multiple user identities at once; 3.15 Sharing a single user identity between multiple terminals; 3.16 SIP compression; PART II: DETAILED PROCEDURES; 4 Introduction; 4.1 The example scenario; 4.2 Base standards; 5 An example IMS registration; 5.1 Overview; 5.2 Signalling PDP context establishment; 5.3 P-CSCF discovery; 5.4 Transport protocols; 5.5 SIP registration and registration routing aspects; 5.6 Authentication; 5.7 Access security-IPsec SAs; 5.8 SIP Security Mechanism Agreement; 5.9 Compression negotiation; 5.10 Access and location information; 5.11 Charging-related information during registration; 5.12 User identities; 5.13 Re-registration and re-authentication; 5.14 De-registration; 6 An Example IMS Session; 6.1 Overview; 6.2 Caller and callee identities; 6.3 Routing; 6.4 Compression negotiation; 6.5 Media negotiation; 6.6 Resource reservation; 6.7 Controlling the media; 6.8 Charging-related information for sessions; 6.9 Release of a session; 7 Routing of PSIs; 7.1 Scenario 1: routing from a user to a PSI; 7.2 Scenario 2: routing from a PSI to a user; 7.3 Scenario 3: routing from a PSI to another PSI; PART III: PROTOCOLS; 8 SIP; 8.1 Background; 8.2 Design principles; 8.3 SIP architecture; 8.4 Message format; 8.5 The SIP URI; 8.6 The tel URI; 8.7 SIP structure; 8.8 Registration; 8.9 Dialogs; 8.10 Sessions; 8.11 Security; 8.12 Routing requests and responses; 8.13 SIP extensions; 9 SDP; 9.1 SDP message contents; 9.2 SDP message format; 9.3 Selected SDP lines; 10 The Offer/Answer Model with SDP; 10.1 The offer; 10.2 The answer; 10.3 Offer/Answer processing; 11 RTP; 11.1 RTP for real-time data delivery; 11.2 RTCP; 11.3 RTP profile and payload format specifications; 11.4 RTP profile and payload format specification for audio and video (RTP/AVP); 12 DNS; 12.1 DNS resource records; 12.2 The naming authority pointer (NAPTR) DNS RR; 12.3 ENUM - the E.164 to URI Dynamic Delegation Discovery System (DDD) application; 12.4 Service records (SRVs); 13 GPRS; 13.1 Overview; 13.2 Packet Data Protocol (PDP); 13.3 Access points; 13.4 PDP context types; 14 TLS; 14.1 Introduction; 14.2 TLS Record Protocol; 14.3 TLS Handshake Protocol

We have telephony to talk to each other, messaging to dispatch mail or instant messages, browsing to read published content and search engines to locate content sites. However, current mobile networks do not provide the possibility for one application rich terminal to communicate with another in a peer-to-peer session beyond voice calls. Mobile telephony with the current technology has been hugely successful and shows that there is immense value in communicating with peers while being mobile, and with increasingly available smarter multimedia terminals the communication experience will be some
