

1. Record Nr.	UNINA9910135385003321
Titolo	De Keten Uitgedaagd : Besturen en Verantwoorden in Een Wereld Vol ICT // R. van Wijk [and three others]
Pubbl/distr/stampa	Amsterdam, [The Netherlands] : , : IOS Press BV, , 2014 ©2014
ISBN	90-5199-535-0
Descrizione fisica	1 online resource (420 pages) : illustrations
Disciplina	338.470040943
Soggetti	Information technology - Germany
Lingua di pubblicazione	Tedesco
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Sommario/riassunto	Accountability is a social issue of the first order, but it is also a source of growing concern and irritation for many organizations. In 2004 the Ministry of Finance and the Ministry of Justice launched an investigation into the possible application of eXtensible Business Reporting Language (XBRL) as a uniform data standard for accountability. In 2006 there was an architecture for Standard Business Reporting. In 2007, the first messages in XBRL were successfully delivered to the tax authorities and the Chamber of Commerce via a generic provision. At the end of 2009, serious efforts were made to achieve the large-scale transition of information chains. Since 2013, with Standard Business Reporting, Logius offers a working and efficient standard solution for mass accountability. Challenging the chain - Management and accountability in a world full of ICT describes the path that Standard Business Reporting has traveled from assignment to solution. Specialists from the field and scientists provide a well-founded and detailed insight into the challenges involved in the transition of information chains. In its versatility, the book is exemplary for the required paradigm shifts within the domain of change. The book also offers all the practical information that parties need to apply the SBR solutions in their own domain. It is now generally known that large-scale ICT programs are about much more than just technology. With Standard Business

Reporting as a model of a domain in which information chains have been tackled thoroughly, The Chain has been challenged to be a not-to-be-missed manual for administrators and program managers who want to manage and account for a world full of ICT.
