Soggetti	Depression in adolescence Adolescent psychopathology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Sommario/riassunto	Short-term Psychoanalytic Psychotherapy (STPP) is a manualised, time-limited model of psychoanalytic psychotherapy comprising twenty-eight weekly sessions for the adolescent patient and seven sessions for parents or carers, designed so that it can be delivered within a public mental health system, such as Child and Adolescent Mental Health Services in the UK. It has its origins in psychoanalytic theoretical principles, clinical experience, and empirical research suggesting that psychoanalytic treatment of this duration can be effective for a range of disorders, including depression, in children and young people. The manual explicitly focuses on the treatment of moderate to severe depression, both by detailing the psychoanalytic understanding of depression in young people and through careful consideration of clinical work with this group. It is the first treatment manual to describe psychoanalytic psychotherapy for adolescents with depression.
