Sommario/riassunto

The book will present the progress made since the last meeting in fall 2013 concerning the analysis of circulating extra-cellular nucleic acids. There are a modest number of laboratories involved in this field, nevertheless the number of papers published by researchers is extensive. The articles which will be published in this meeting report will be a valuable contribution for researchers and research students alike and will help them to stay on top of the developments in different research areas and to „cross borders“ between them.
